

Experimental test should be allowed while considering all precautionary measures and rule laid by the authorities concerning to the Covid 19 pandemic situation.

provide protection equipment like mask and keep distance between students.

Although the last semester was fine for me, in my opinion a regular online meeting (e.g. using MS Teams) would be good to have (e.g. in every second week).

This is okay for PhD students in the research and thesis writing stage. The Ph.D school can assist in its work by overcoming all difficulties that hinder students' progress.

I think we can get the lectures online but laboratories of the university must be open for the students who have experiments work on their research topic.

Keep the students updated, organise online conferences

allow us to do the practical work

I think it's fine now.

The subjects that require practical training like Materials science, material processing etc. should be made more and more interactive by including animations, videos in the presentation so that the student can see it virtually. Introduction of new courses for PhD students like Seminars where they learn How to publish , what is Peer review, knowledge of H index IF, research related topics should be discussed. Student presentations and their expectations from the course should be time to time be considered.

Sorry, I have no idea

I will talk just about the subjects part it should be well prepared more than now for distance learning, trying to provide proper devices for PhD students to handle this situation better like laptops

To allow PhD students for the access to the labrotary atleast

Seminar should be made in ZOOM platform, also the supervision meeting. Microsoft Teams did not work properly during this last period. Could you have a personalized student page and their we can access the ZOOM to talk with supervisor, to participate in the seminar and have properly support from University stuff? Please, during the pandemic situation who is the responsible person from secretary and Educational issues, its Ms Emerse and Professor Gabriela, respectively?

Supporting the PhD who have experimental work to save time

The subjects can be done online just fine, for me, I would be relieved if my classes could be held online as well.

Online education, flexible management of research progress.

A második oldal első első 7 kérdését kérem ne vegyék figyelembe! Komplex vizsga után nem voltak tantárgyaim, de nem lehet kihagyni a kérdéseket. Továbbá alkalmazásban állok az Egyetemen ezért a korona alatt is bejárhattam dolgozni/kutatni így a vírus nem befolyásolta a kutatómunkámat.

The online consulting opportunities can help a lot for the students. A systematic online consulting plan could be given for the semester.
