## **Professional Bio**

I'm a Senior Manager in PwC's technology consulting practice specialized in the technology, info-communications and entertainment industry sector. Previously I have worked for Accenture. I hold MSc degree from the Budapest University of Technology and Economics and also have ITIL Foundation, Six Sigma Green Belt and LEAN certificate.

I have more than 12 years experience in telecommunication and IT developments, telco and IT strategy, operation and process due-diligence and cost saving projects. I have also experienced in CRM, Billing and OSS systems, processes and technologies area.

I mainly focus on defining real life use cases of Artificial Intelligence e.g RPA and Industry 4.0.

## **Role description**

I'm a senior manager in the Technology Advisory team of PwC Hungary. I'm leading Artificial Intelligence, Robotic Process Automation (RPA) and Industry 4.0 initiatives. I'm representing PwC in the RPA workgroup of Hungarian Outsourcing Association (HOA) and in the National Technology Platform (industry 4.0 platform).

As a Senior Manager I have other roles which include:

- Project and program management
- Leading projects and project teams
- Coaching people

## PwC Introduction

# PwC Introduction

*Our offices can be found all around the world*

*Our clients include the world's largest companies*

**150** years

**158** country

**236 000**  
colleagues

Győr ● ● Budapest

**881**  
colleagues

**pwc**

# Our office at Budapest

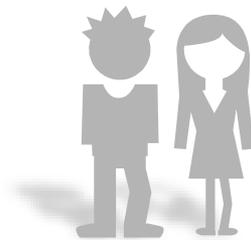

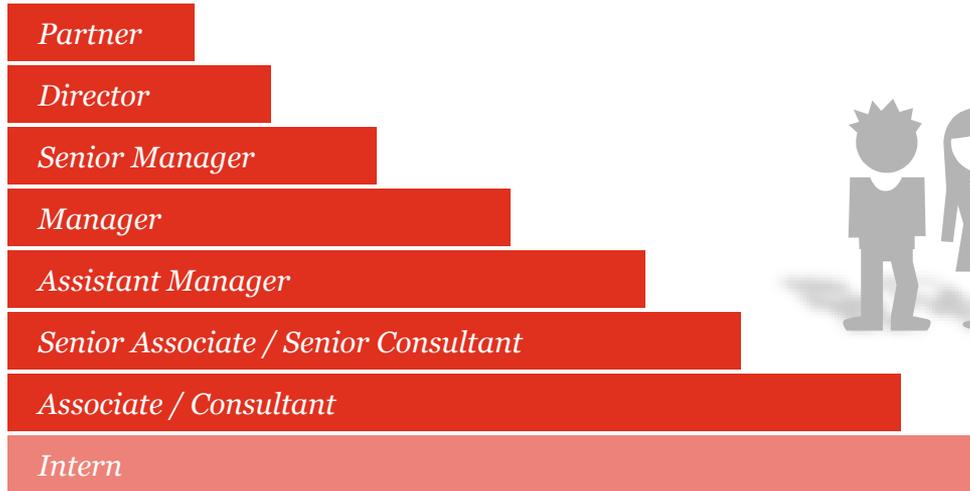

**Universum:**  
***PwC is the 2nd  
most attractive  
employer in the  
world\****

*\*based on the  
inquiry of  
240,000 students  
in business studies  
from 12 economic  
world-power  
countries*

# PwC as Workplace

Expertise

Competitive salary

Fringe benefits

Development opportunity, carrier path

# We are working for several sectors

**Retail and consumer sector**

**Technology**

**Financial services**

**Automotive industry**

**Pharmaceutical and healthcare industry**

**Entertainment industry**

**Industrial products**

**Communication**

**Energy and utilities**

**Public sector**

# Service Lines and Services

## Assurance

- 318 colleagues
- 18 interns
- 3 segments – Audit, RAS, CMAAS
- 3 audit groups– CIP, TICE, FS

## TLS

- 251 colleagues
- 40 interns
- 2 segments – Tax, Legal Services
- 4 groups– GIS, CT, TRC, TRS

## Advisory

- 114 colleagues
- 45 interns
- 3 segments – Deals, Management Consulting, Technology

# Advisory

## Deals

- Complex research, analysis, data room
- Business evaluation, financial modeling, transaction support, fraud detection
- Excel, interactive model, study
- Accounting, finance, business evaluation, corporate finance

## Management Consulting

- Client interviews, brainstorming, benchmarking, data analysis
- Corporate strategy, process, organizational structure, cost-benefit analysis, study
- Presentation: understandable message from the numbers
- Business economics, project management, strategy

## Technology Advisory

- Client interviews, brainstorming, benchmarking, data analysis
- IT strategy, BI tools, system implementation, digitization
- Presentation & dashboards, mobile app
- Computer science, economic informatics, project management

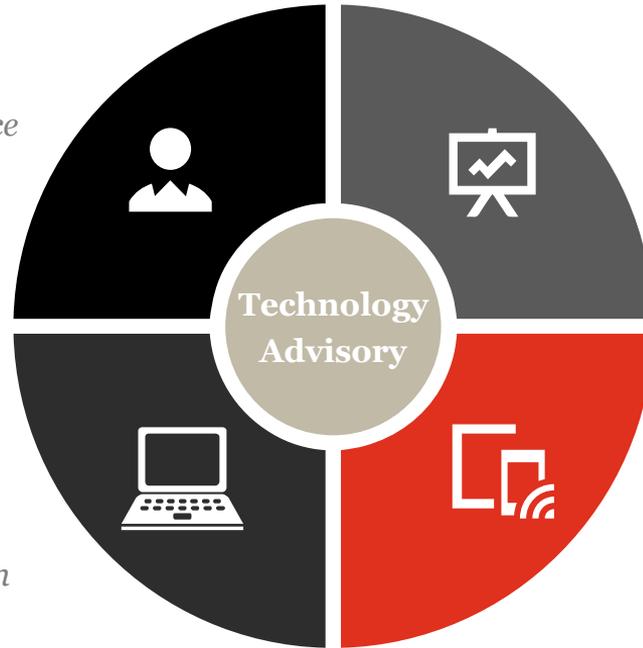

# Technology Advisory

## CIO agenda

*IT strategy, governance model, processes, business models*

## IT system integration

*Supplier selection, system implementation*

## Big data & data analytics

*Datawarehouse, Big Data solutions, data analysis, BI tools*

## Digital

*FinTech, Industry 4.0, IoT, drone technologies, digital channels, mobile technologies*

# 02

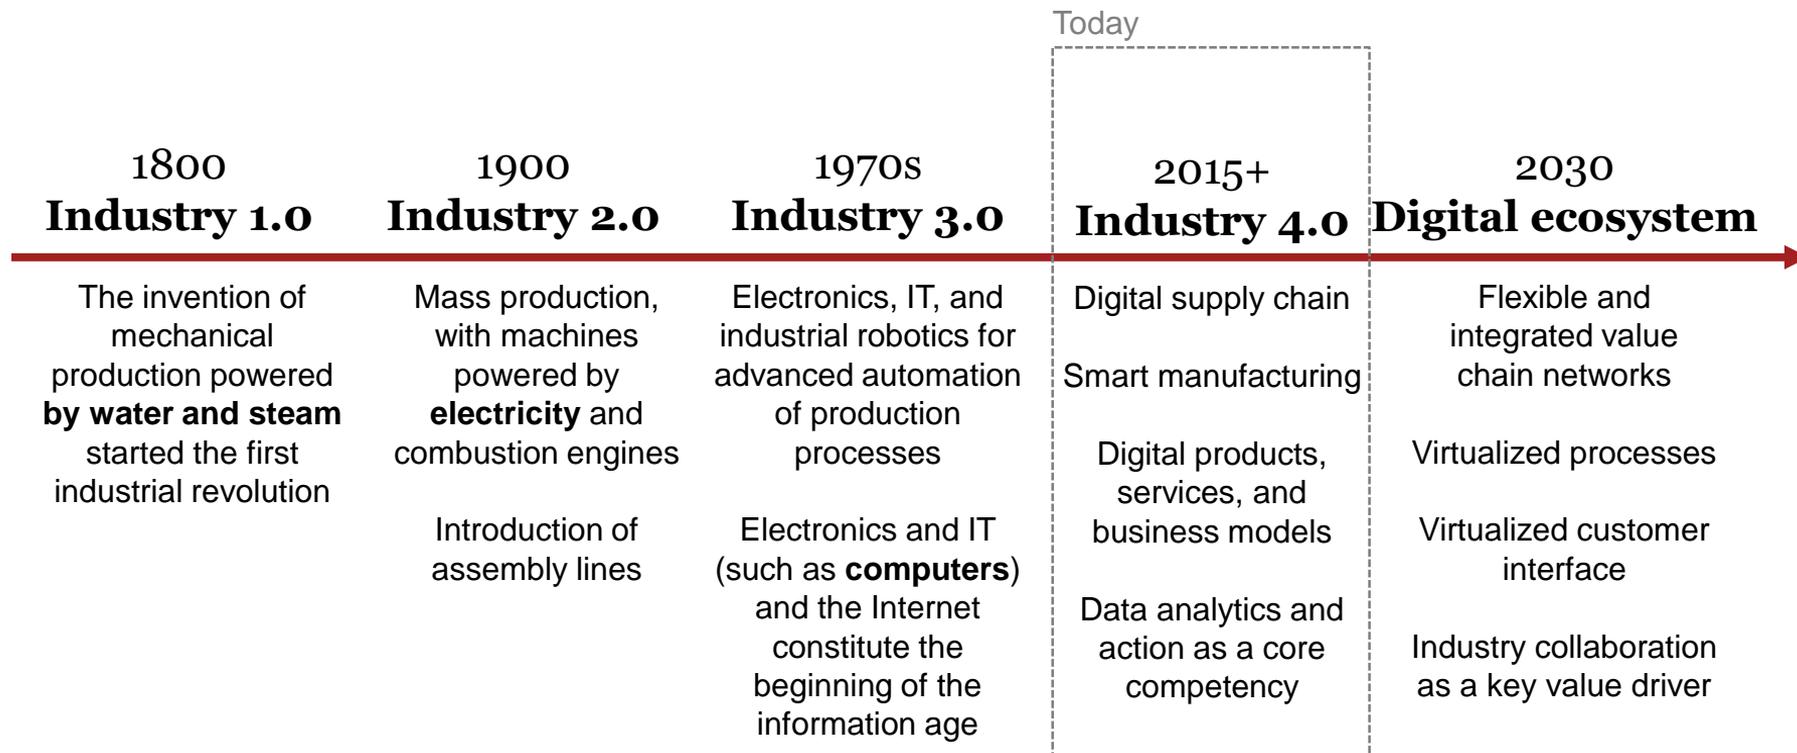

## Industry 4.0 introduction

# Question

---

- Do you know the stages of the industrial revolution?
- What does Industry 4.0 means?

# Road to Industry 4.0

# Definitions of Industry 4.0

Industry 4.0 is the evolution to cyber-physical systems, representing the fourth industrial revolution on the road to an end-to-end value chain with Industrial IoT and decentralized intelligence in manufacturing, production, logistics and the industry. (i-scoop.eu)

Computers and automation will come together in an entirely new way, with robotics connected remotely to computer systems equipped with machine learning algorithms that can learn and control the robotics with very little input from human operators. (Marr, 2016)

**In PwC's view, Industry 4.0 is driven by:**

- 1) Digitisation and integration of **vertical** and **horizontal value chains**
- 2) Digitisation of product and service offerings
- 3) Digital business models and customer access

# Question

---

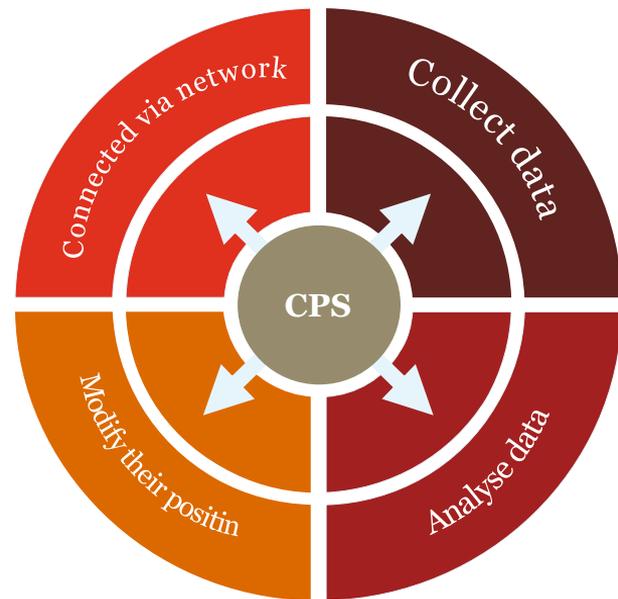

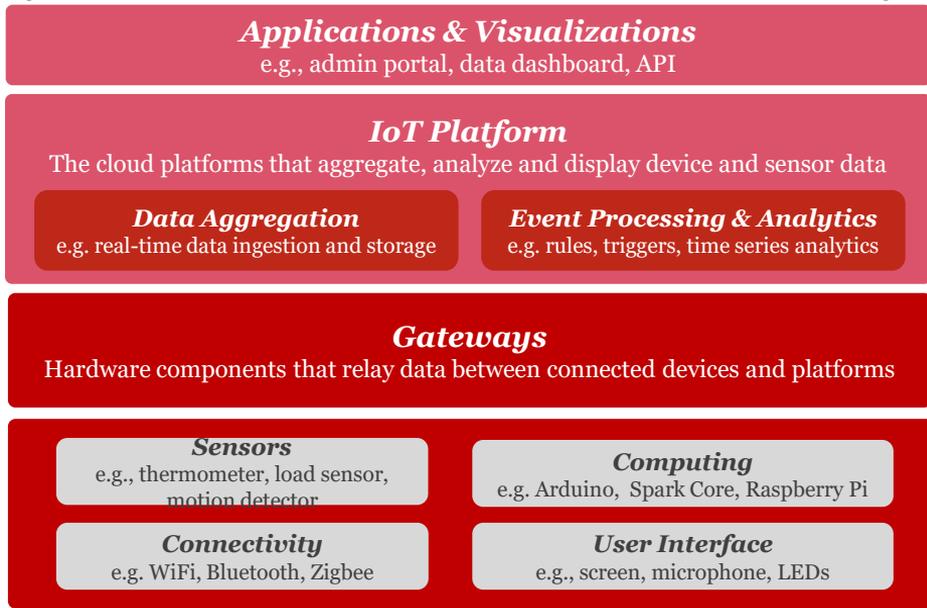

- What technologies does Industry 4.0 utilize?

# Technical background of Industry 4.0 – IoT / CPS

Example

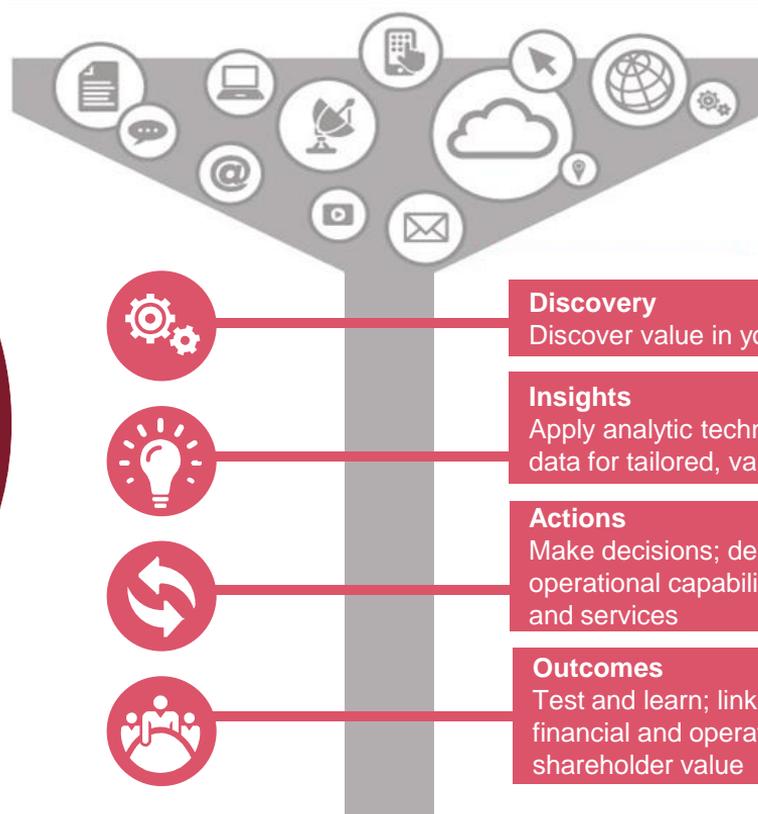

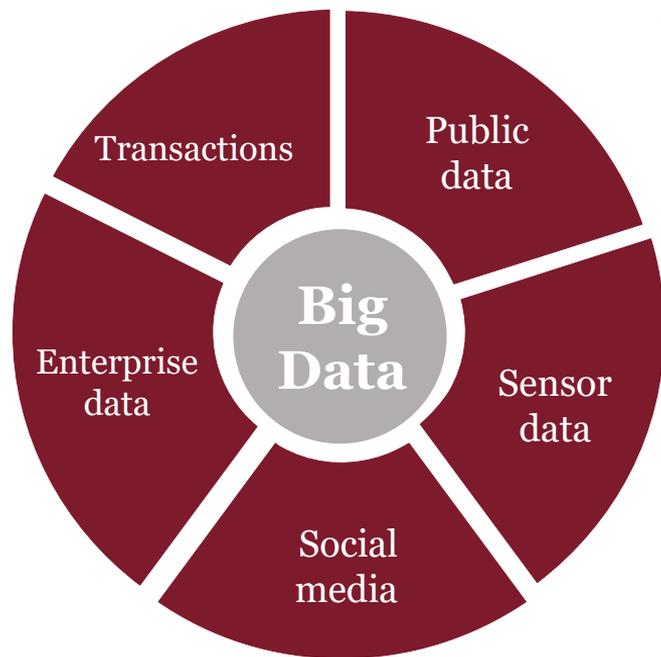

Business IT 3<sup>rd</sup> Party

Device User

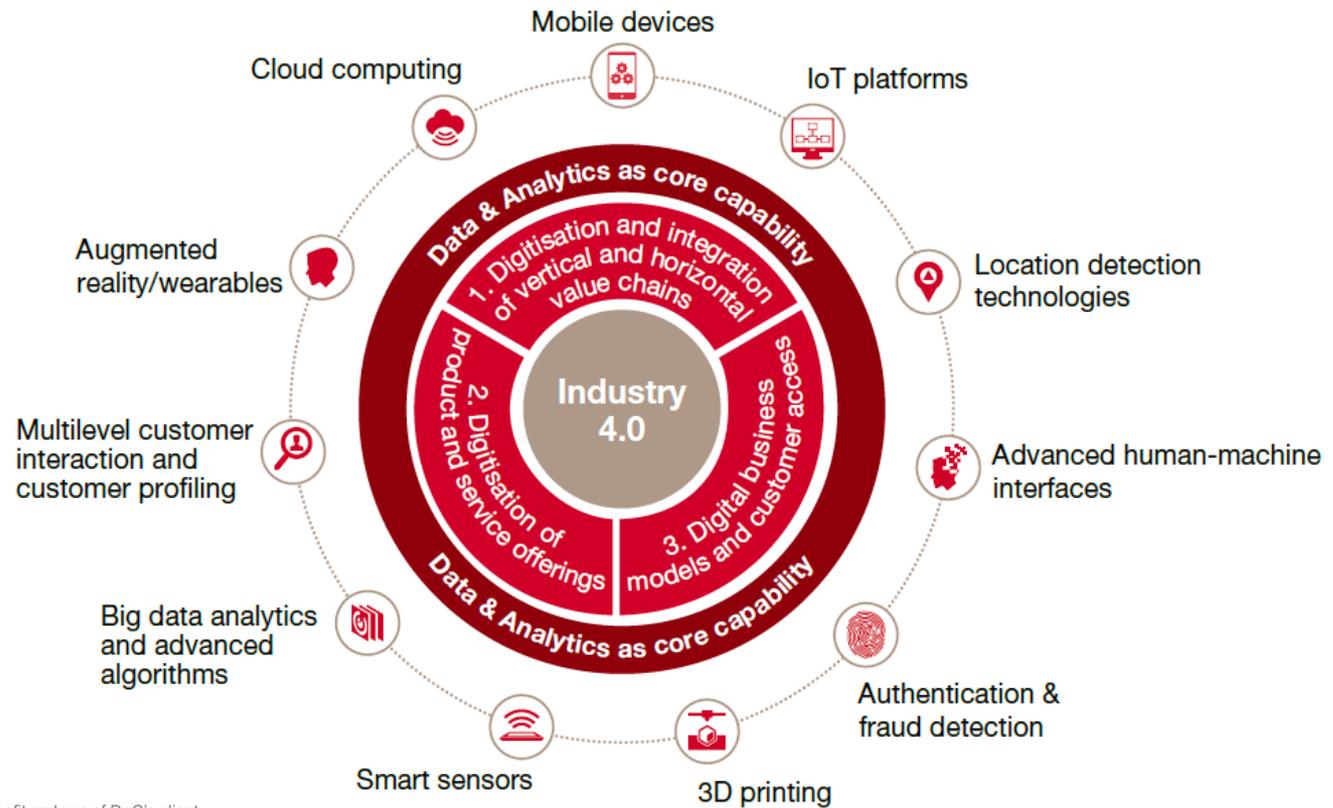

# Technical background of Industry 4.0 – Big Data

Example

# PwC Industry 4.0 framework and Contributing digital technologies

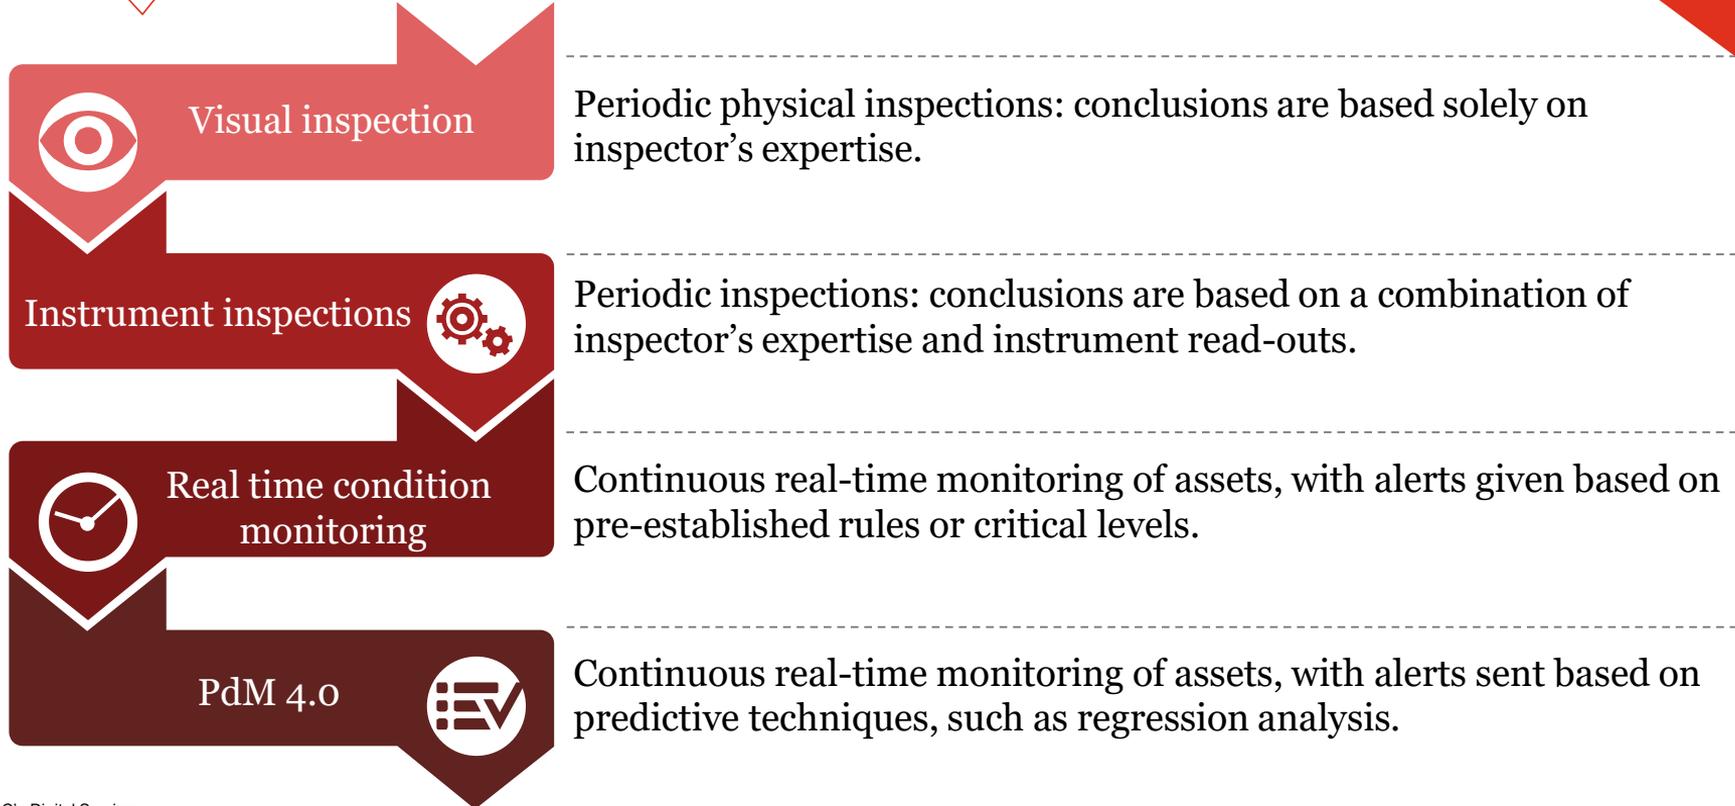

# Question

---

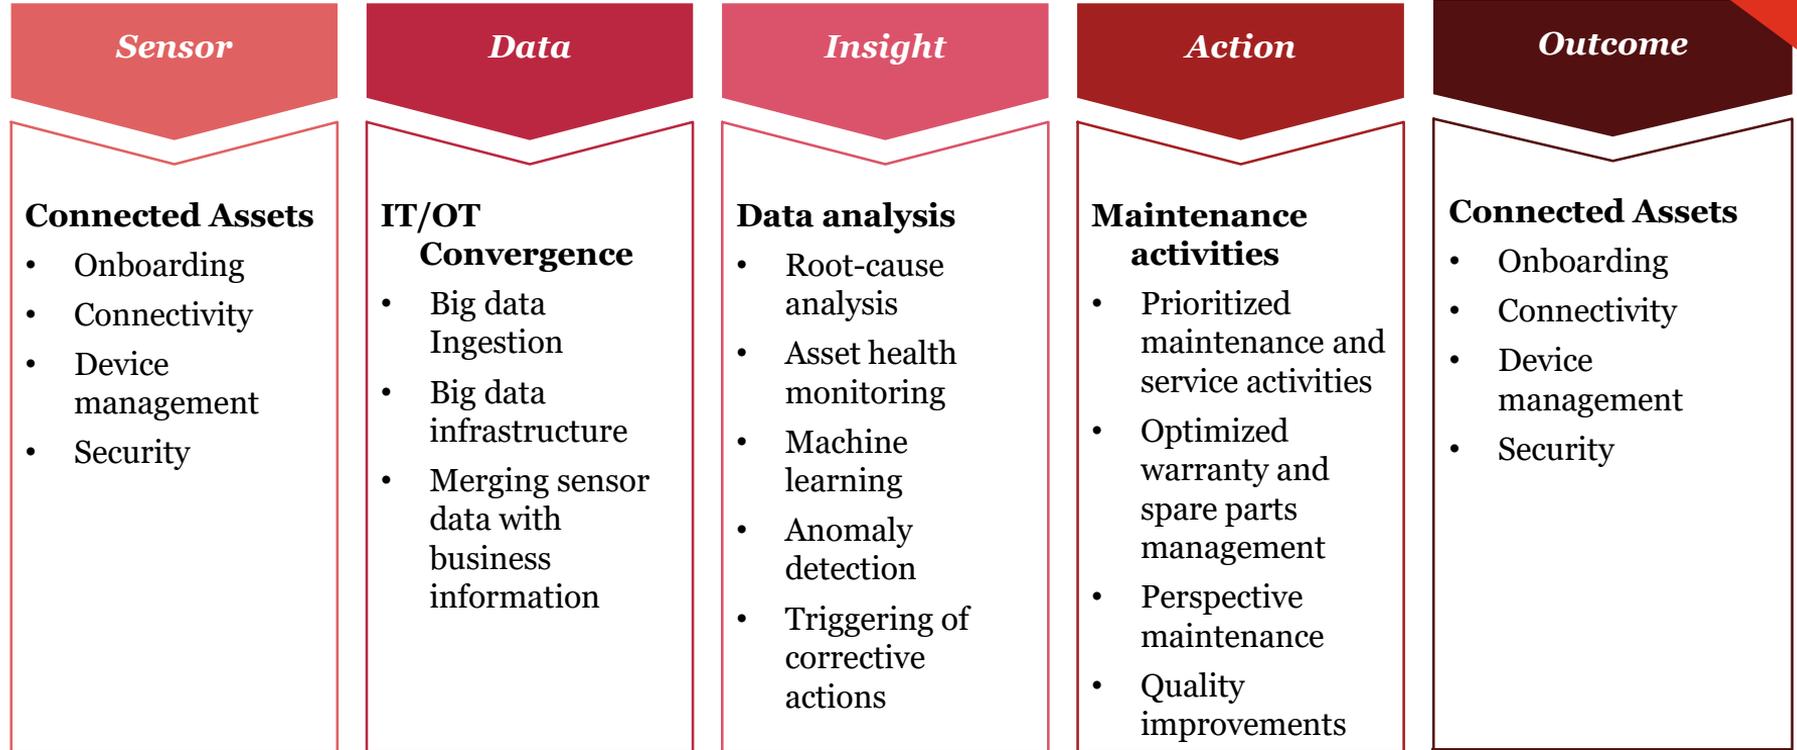

- What solutions does Industry 4.0 realize?

# Phases of maintenance – Predictive Maintenance

# Connection between Maintenance and Industry 4.0 – Predictive Maintenance

Example

# Predictive maintenance in a mining company

Example  
Real life use-case

## *The Problem*

- **40** km of conveyor belts
- **80** employees
- Insufficient **reliability** of visual checks
- High **maintenance costs**
- **Damaged** conveyor belts
- **Loss** of mining capacity

Confidential  
client data

*Annual conveyor belt servicing costs  
+ more losses caused by reactive style of maintenance*

# Predictive maintenance in a mining company

Example  
Real life use-case

## *Possible Solutions*

**Sensors**

**Thermal cameras**

**Drones**

**Optic cables**

**Noise detectors**

**Confidential  
client data**

*Expected investment  
after testing and business case calculations*

# Predictive maintenance in a mining company

Example  
Real life use-case

## *Key Benefits*

- Salary **cost savings**
- **Facilitation** of maintenance work
- **Increased** maintenance accuracy
- **Faster** repairs procedures
- **Less** damage to conveyor belts
- **Increased** mining capacity

Confidential  
client data

*Expected annual cost savings  
with positive ROI in less than 1 year*

## Return on investment in less than 1 year

Confidential client data

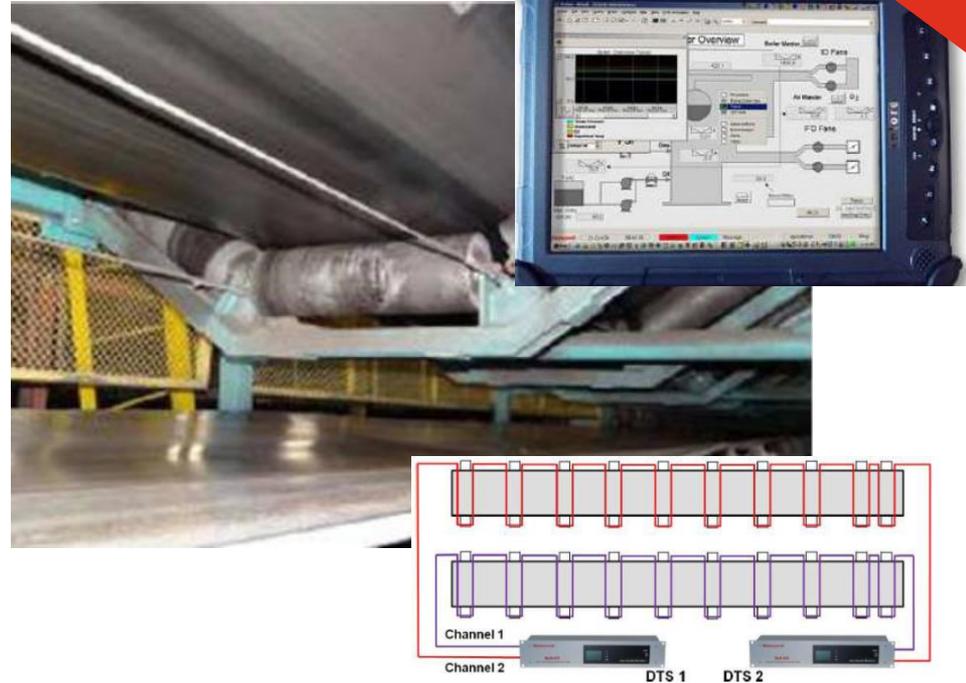

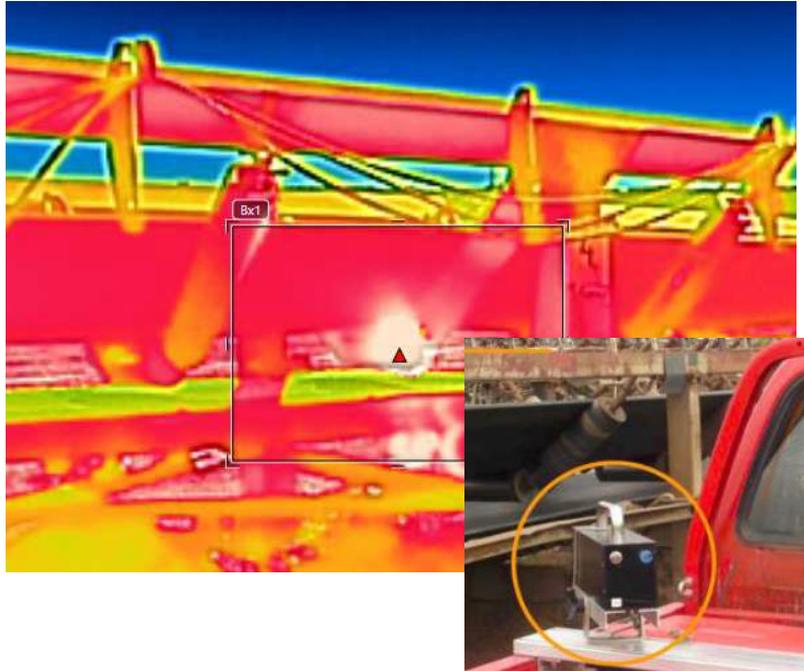

Current annual  
costs

One-time  
investment

Annual  
savings

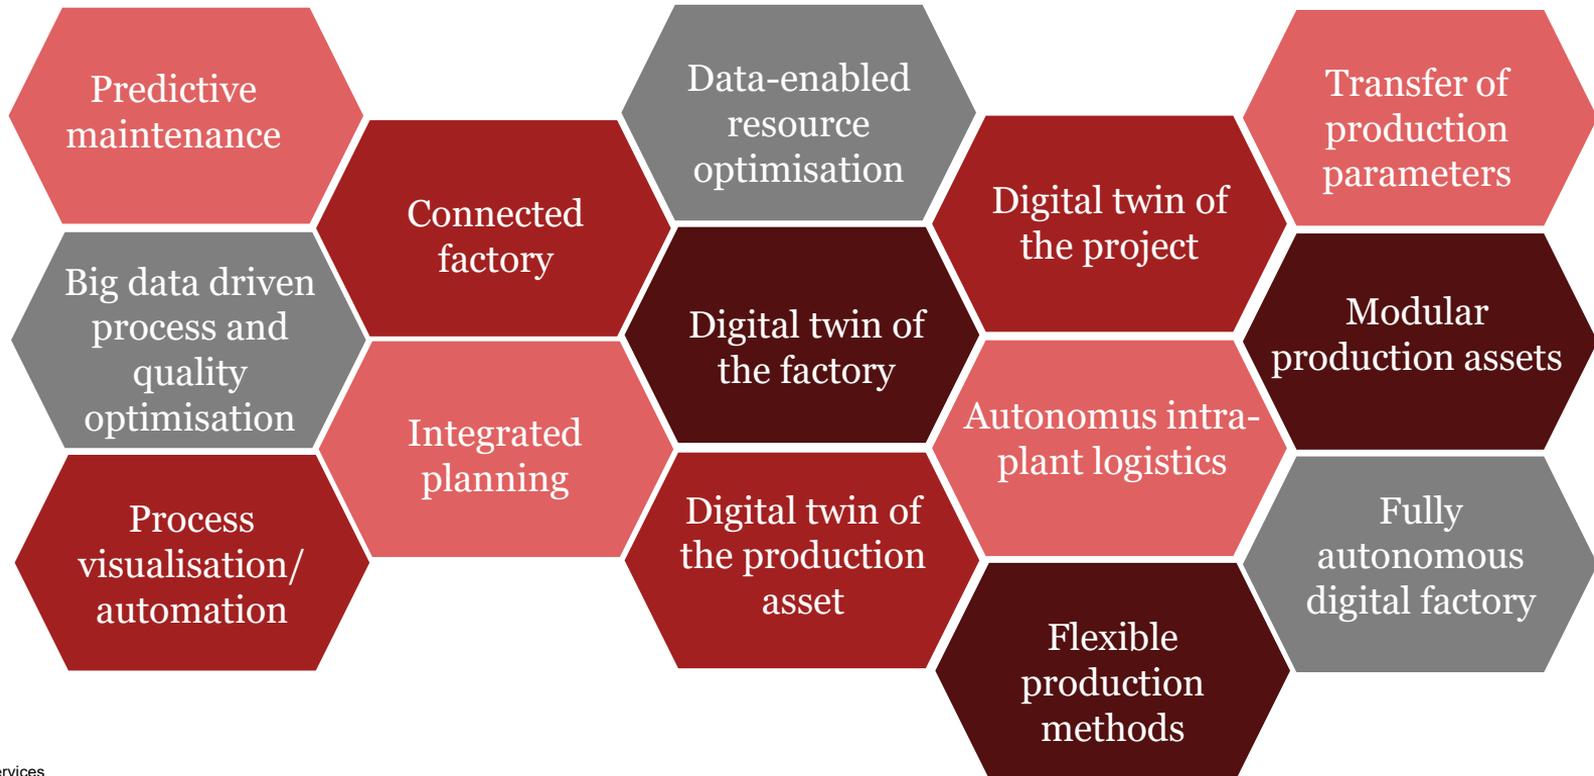

Example  
Real life use-case

# Possible solution – thermal camera / optic cable

# Industry 4.0 solutions realized through digital technologies

Summary

# Industry 4.0 = Smart Factory?

What makes  
a factory  
industry 4.0  
ready?

## Technical assistance

Systems to support humans in making decisions, solving problems and assist with tasks

## Interoperability

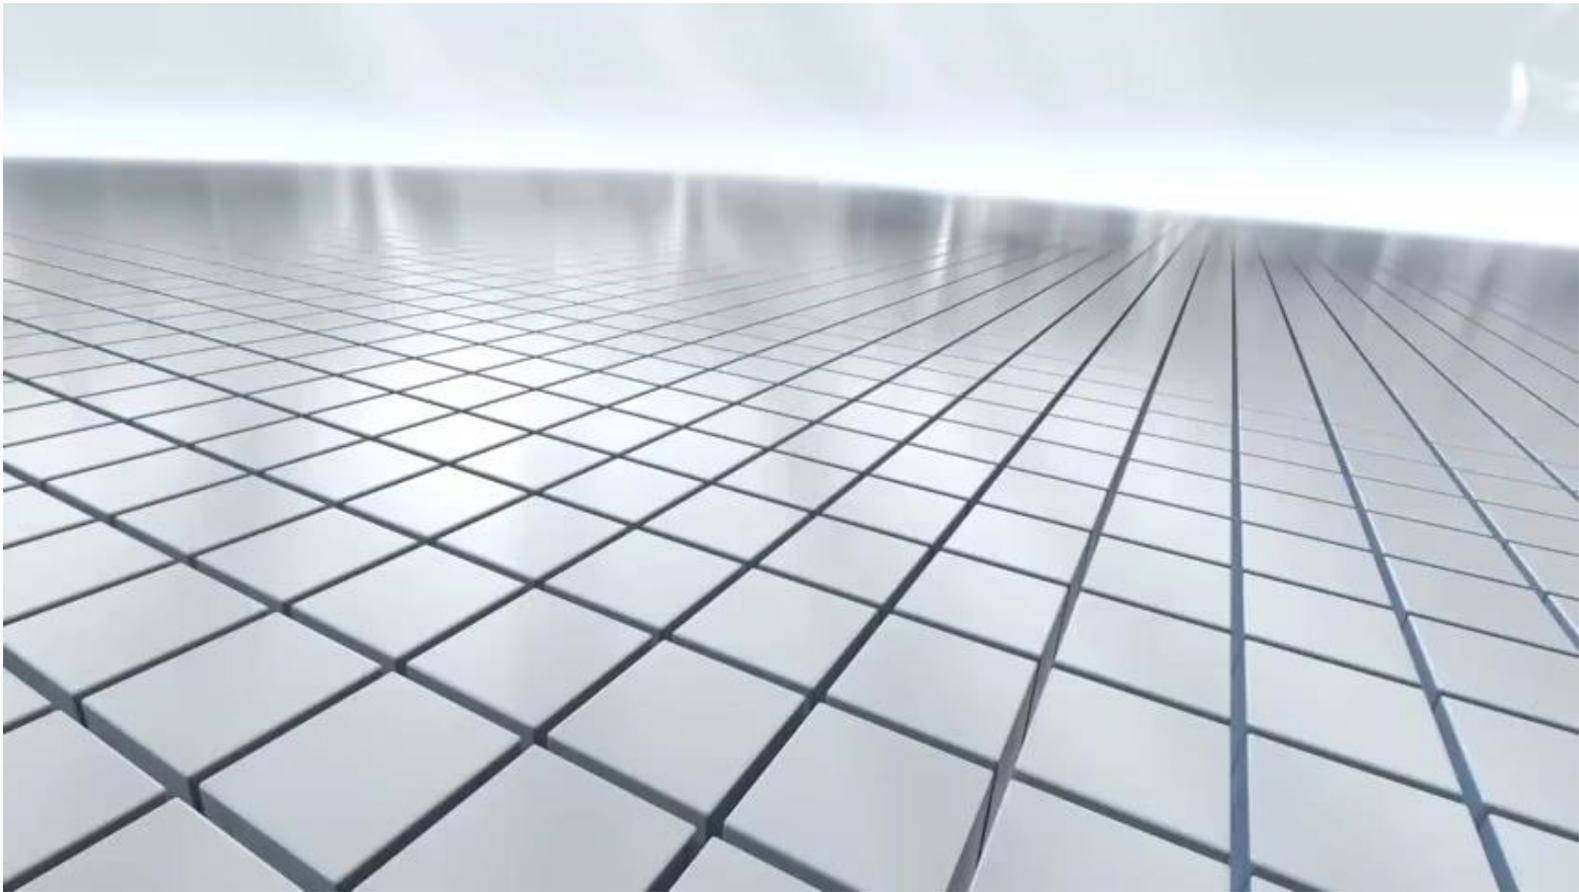

Machines, devices and people connect and communicate with each other

## Information Transparency

System create virtual copy of physical world through sensor data

## Decentralized decision-making

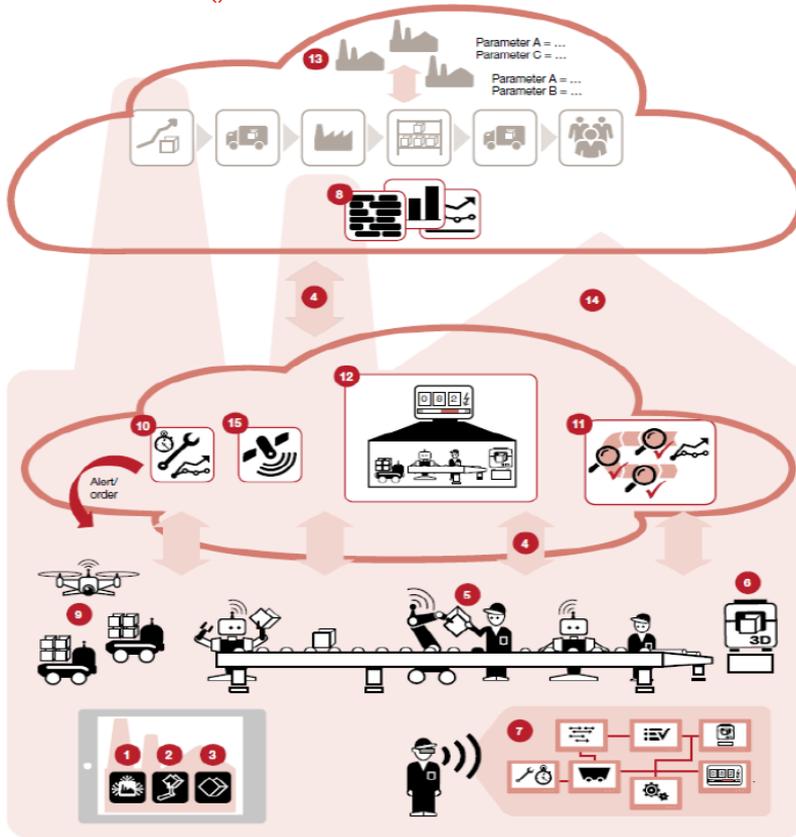

Cyber-physical systems make simple decisions become as autonomous as possible

# Key technology features of a Smart Factory enabled by Industry 4.0

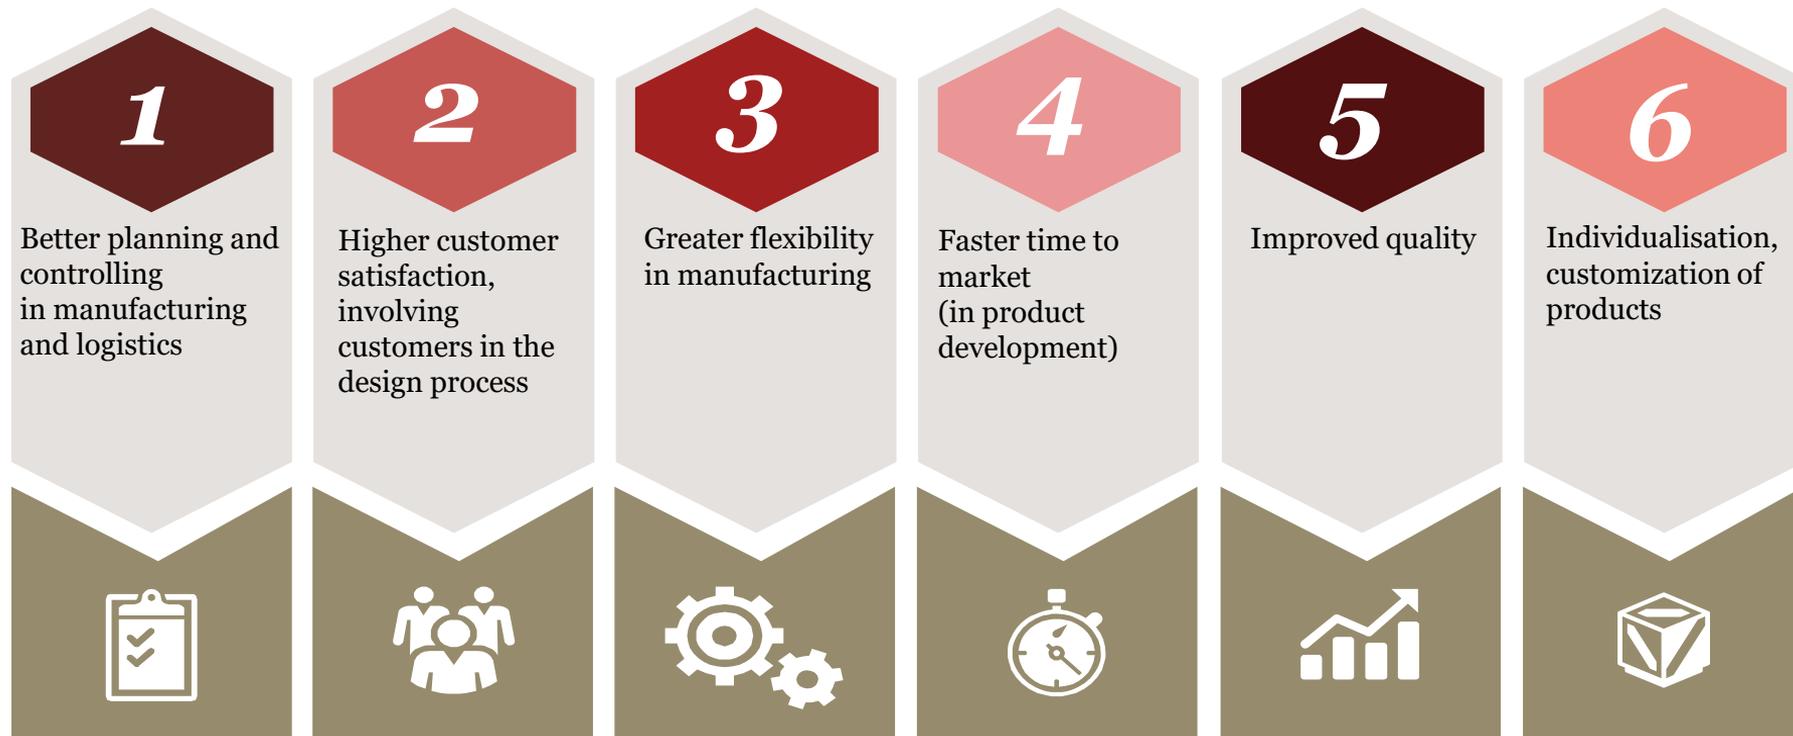

- |           |  |           |                                  |
|-----------|--|-----------|----------------------------------|
| <b>1</b>  | Digital twin of the factory                  | <b>6</b>  | Flexible production methods      |
| <b>2</b>  | Digital twin of the production asset         | <b>7</b>  | Process visualisation/automation |
| <b>3</b>  | Digital twin of the product                  | <b>8</b>  | Integrated planning              |
| <b>4</b>  | Digital twin of the production asset         | <b>9</b>  | Autonomous intraplant logistics  |
| <b>5</b>  | Modular production assets                    | <b>10</b> | Predictive maintenance           |
| <b>11</b> | Big data driven process/quality optimisation |           |                                  |
| <b>12</b> | Data enabled process optimisation            |           |                                  |
| <b>13</b> | Transfer of product parameters               |           |                                  |
| <b>14</b> | Fully autonomous digital factory             |           |                                  |
| <b>15</b> | Track and trace                              |           |                                  |

# Biggest challenges or inhibitors for building digital operations capabilities

# Along the challenges several benefits bound to Industry 4.0

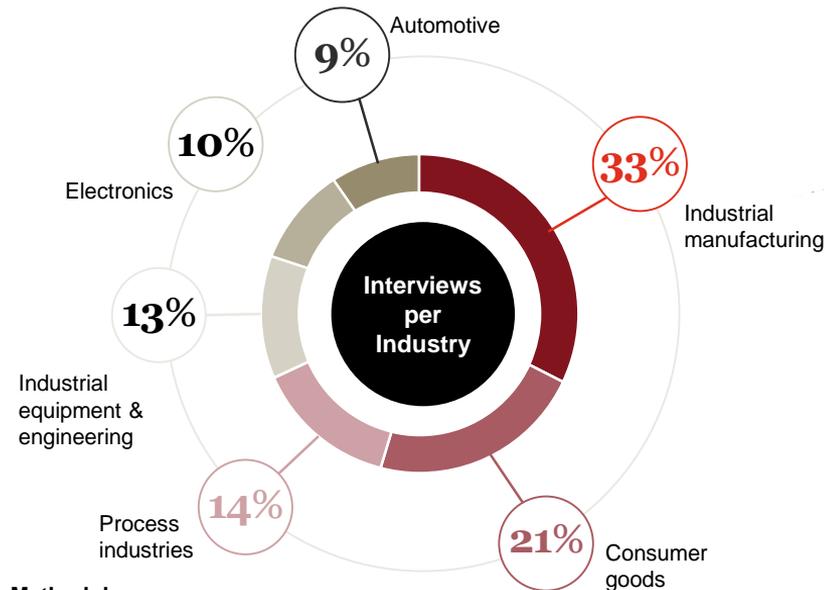

# 03

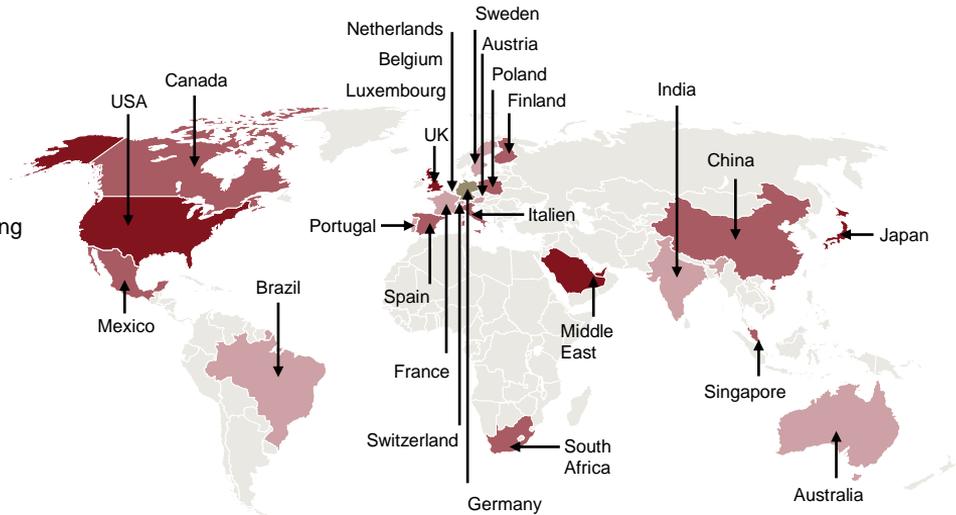

## PwC Strategy&'s 2018 Global Survey on Industry 4.0

# PwC | Strategy&'s Global Digital Operations Survey 2018 is the biggest survey of its kind of studies of Industry 4.0 to date

## Industry split

## Participating countries

### Methodology:

Based on research conducted between September and December 2017 with over 1,155 senior executives from industrial products companies in 26 countries. The majority of participants were Chief Digital Officers or other senior executives with top-level responsibility in their company for Industry 4.0 strategy and activity. Results were weighted by country GDP to provide a balanced view in global.

# Legend

**Digital operations maturity**

**DC**

Digital Champion

# The global Industry 4.0 study focuses on Digital Operations Champions and how they master the orchestration of four different ecosystem layers

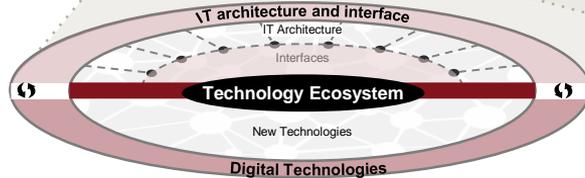

## Customer Solution Ecosystem

Innovative Business Models and Customer value

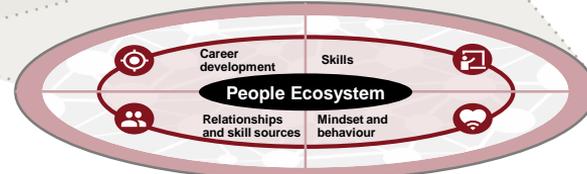

## Digital Operations Ecosystem

Solution Enablement and Value chain efficiency

## Technology Ecosystem

Intelligence and Connectivity

## People Ecosystem

Competences and culture

# Overview of the Customer Solutions ecosystem

## Business model and customer value layer

- personalization,
  - customization,
  - enhanced features,
  - improved logistics,
  - creative revenue models,
  - innovative designs and applications
- 
- includes external entities

# Question

- Which industry do you believe has advanced capabilities in the Customer Solution Ecosystem and why?

## Key industries

Automotive

Consumer goods

Electronics

Industrial equipment  
& engineering

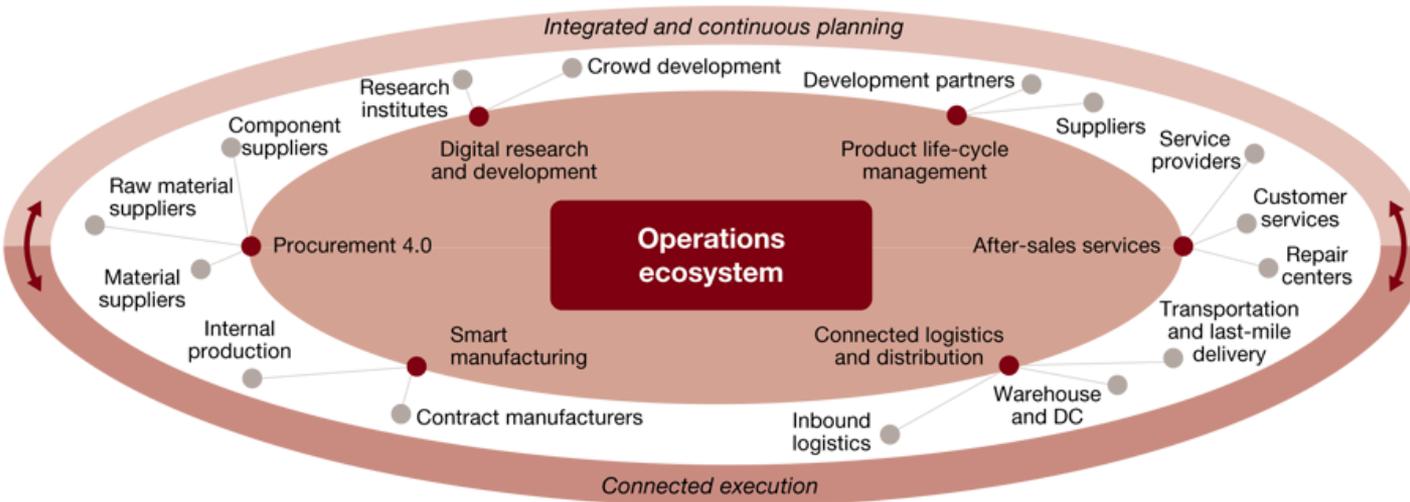

Industrial  
manufacturing

Process industries

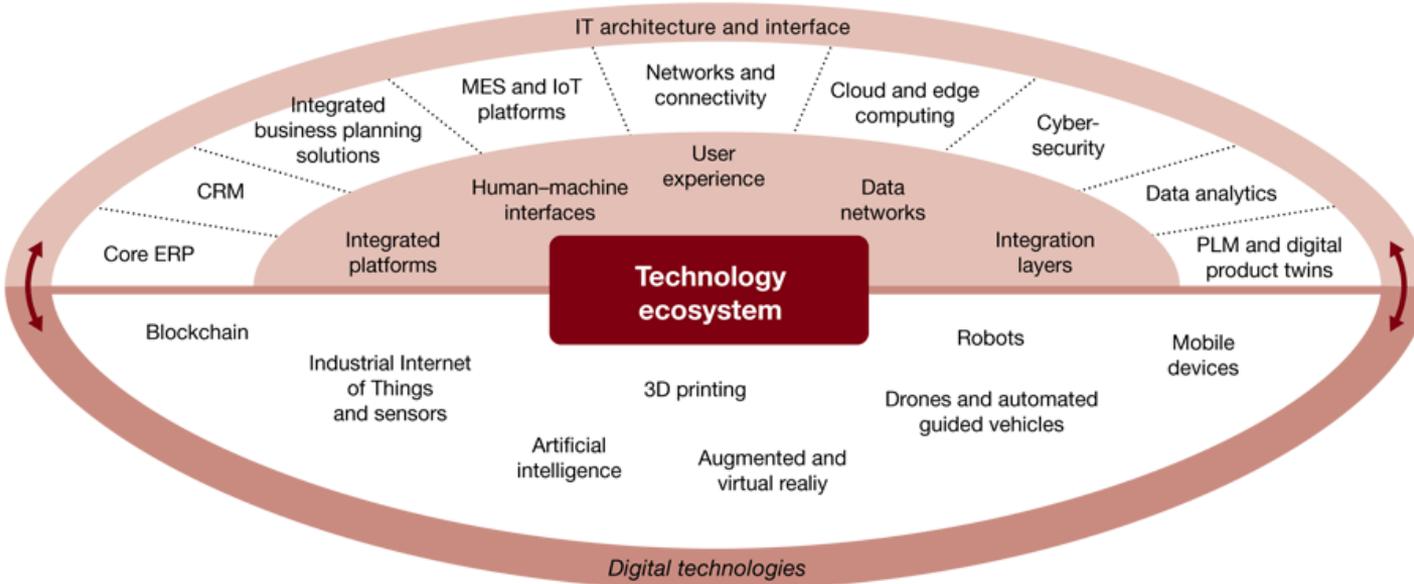

# Overview of the Operations ecosystem

## Solution enablement and value chain efficiency layer

- product development,
  - planning,
  - sourcing,
  - manufacturing,
  - warehousing,
  - logistics,
  - services
- 
- includes external entities

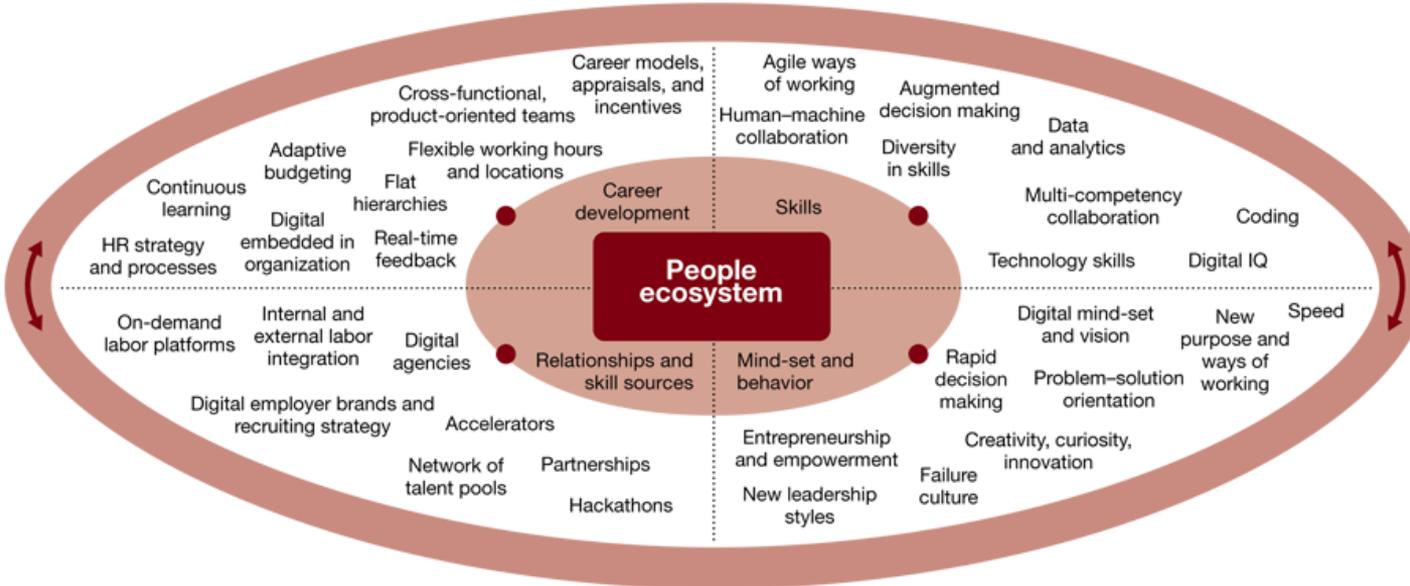

# Overview of the Technology ecosystem

## Intelligence and connectivity including pivotal technologies for Industry 4.0

- artificial intelligence,
- 3D printing,
- Industrial Internet of Things (IIoT)
- sensors,
- augmented and virtual reality,
- robots

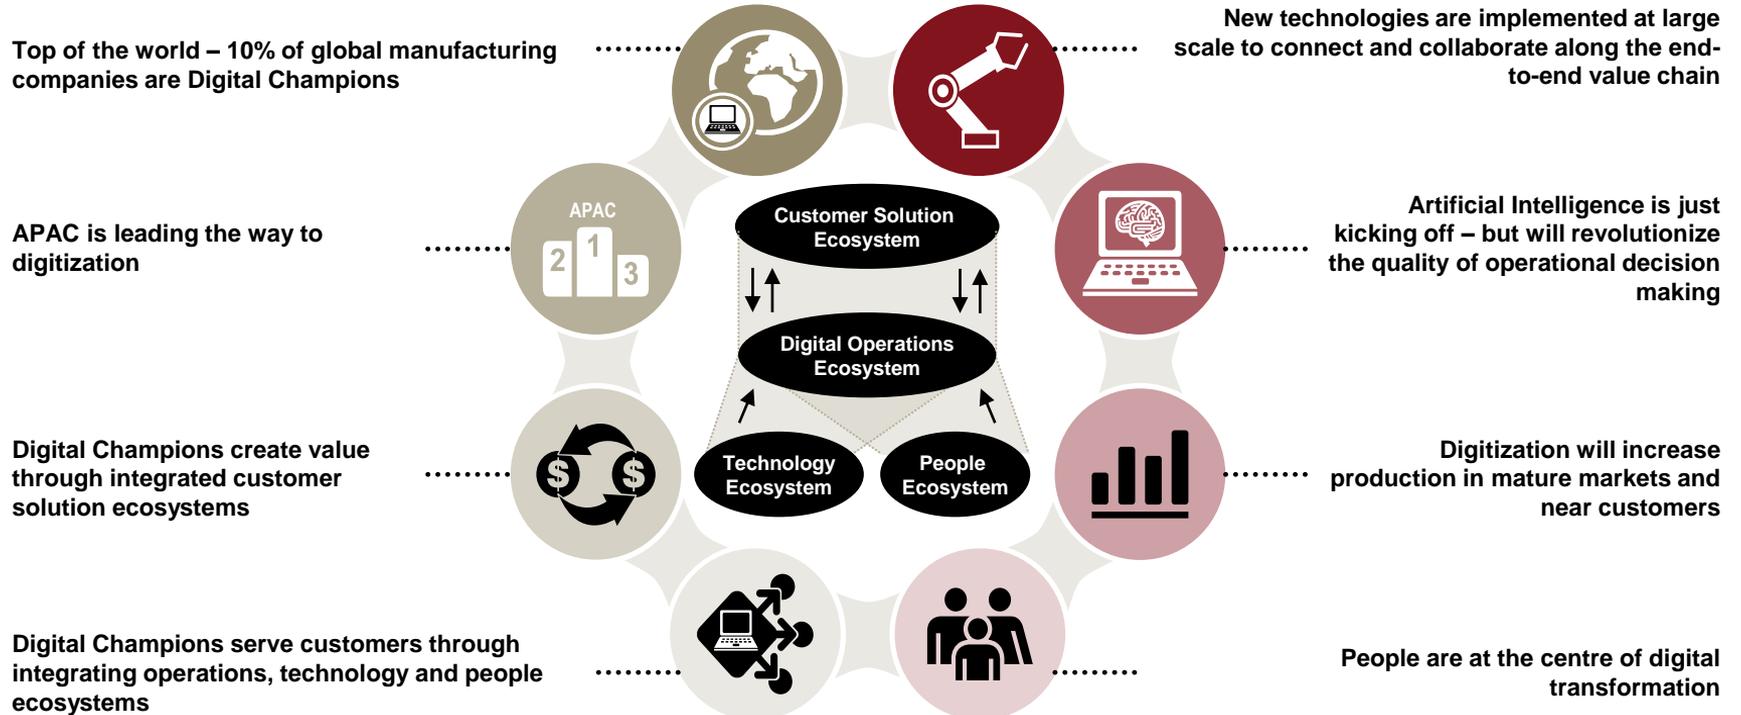

# Overview of the People ecosystem

## Domain of organizational competence and culture

- skills,
- mind-set,
- behavior,
- relationships,
- skill sources,
- career development

# Digital Champions lead the digital transformation

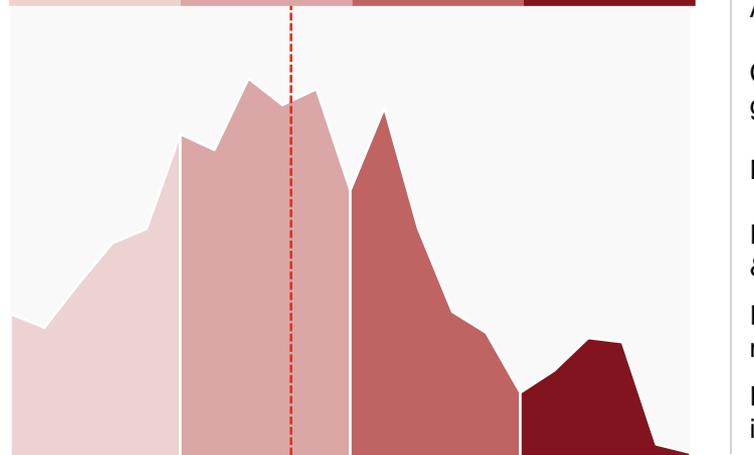

# 1. Top of the world – 10% of global manufacturing companies are Digital Champions

Global index distribution

Global average: **43.3 pts.**

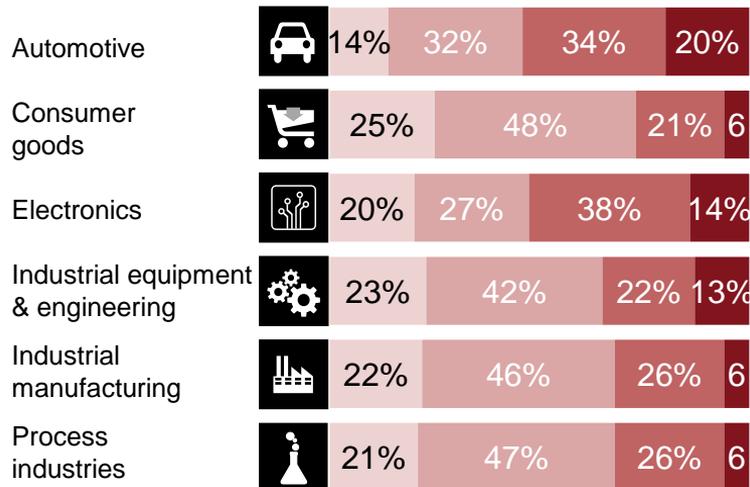

0 10 20 30 40 50 60 70 80 90 100 pts.

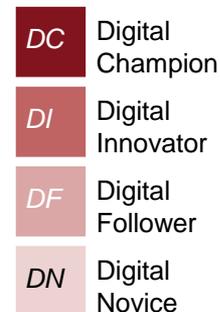

Base: 1,155 companies

Level of Digital Operations Maturity by key industry

Legend

# Question

- Why APAC?

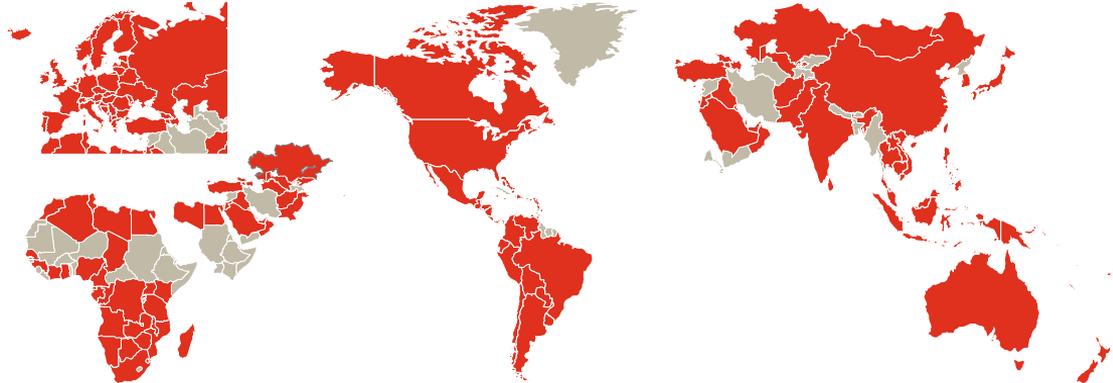

World regions

EMEA

Americas

APAC

## 2. APAC is leading the way to digitization

### Digital Operations Maturity: Maturity Level Splits & Benefits of Investing in Digital Technologies

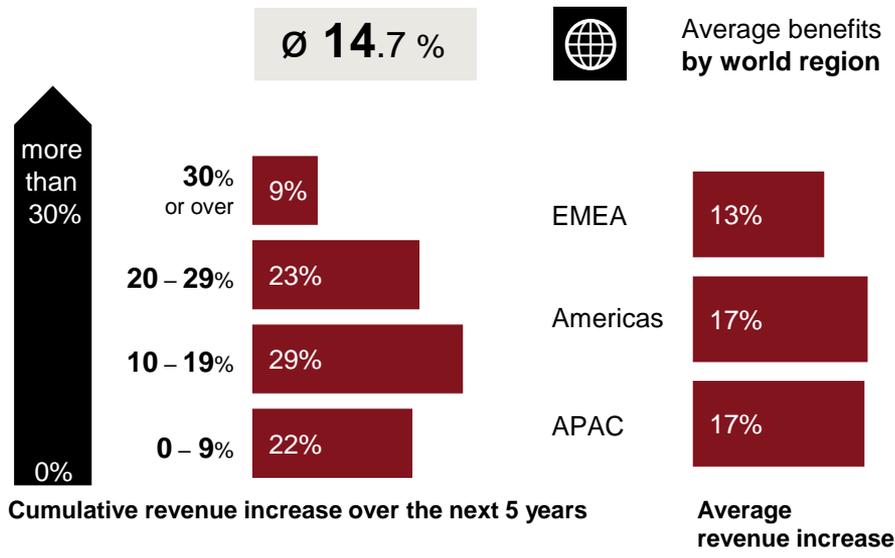

Level of Digital Operations Maturity by world region

Legend

- DC** Digital Champion
- DI** Digital Innovator
- DF** Digital Follower
- DN** Digital Novice

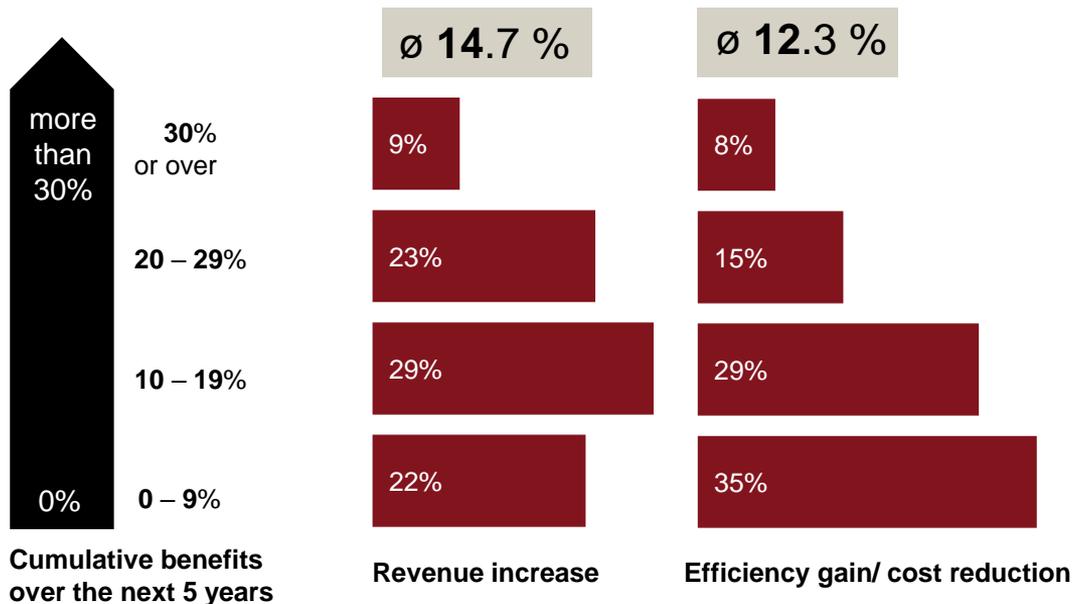

Question (Q2): **What benefits do you expect from your investments in digital technologies cumulatively over the next 5 years?**  
 Please compare your expected situation in five years with your situation now.  
 Base: 1,155 companies

Note: Index group distribution in percent // Base: 1,155 companies

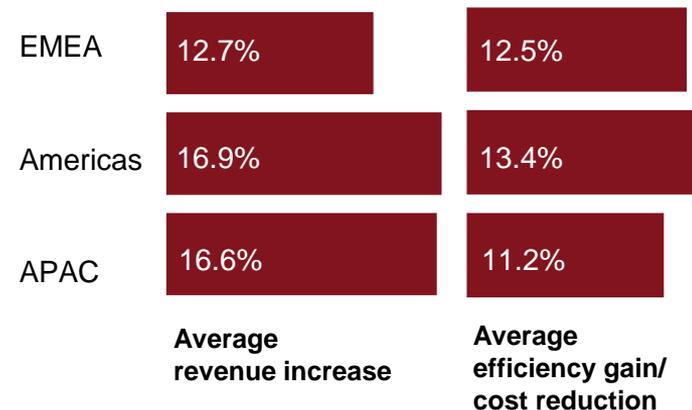

### 3. Digital Champions create value through integrated customer solution ecosystems

#### Benefits of Investing in Digital Technologies

#### Average benefits by world region

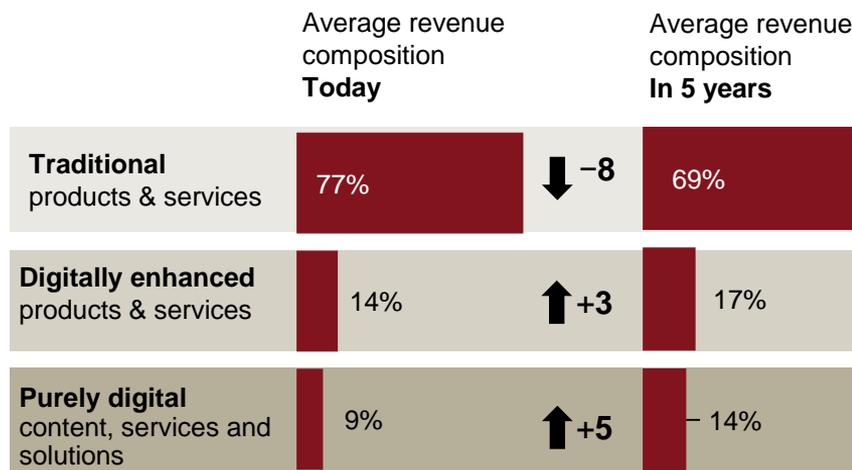

Question (Q2): What benefits do you expect from your investments in digital technologies cumulatively over the next 5 years? Please compare your expected situation in five years with your situation now. Base: 1,155 companies

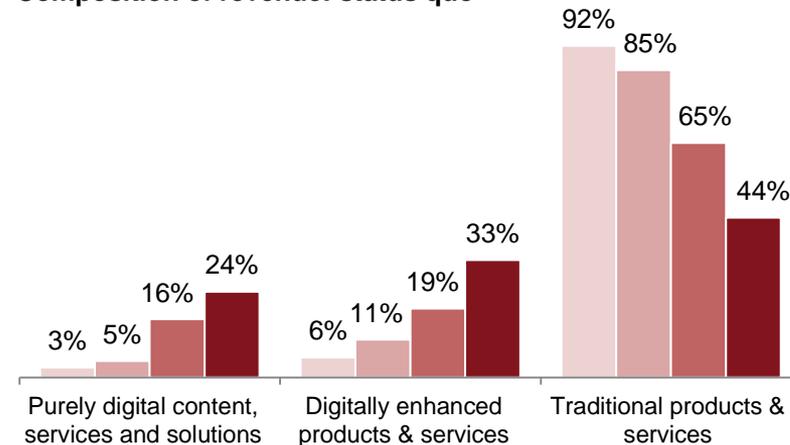

### 3. Digital Champions create value through integrated customer solution ecosystems

Leaders already generate >50% of their revenues from digital or digitally enhanced products and services

Question (Q8): What is the composition of your revenue today and in 5 years?  
 Note: average revenue shares in percent, differences in percentage points  
 Base: 1,155 companies

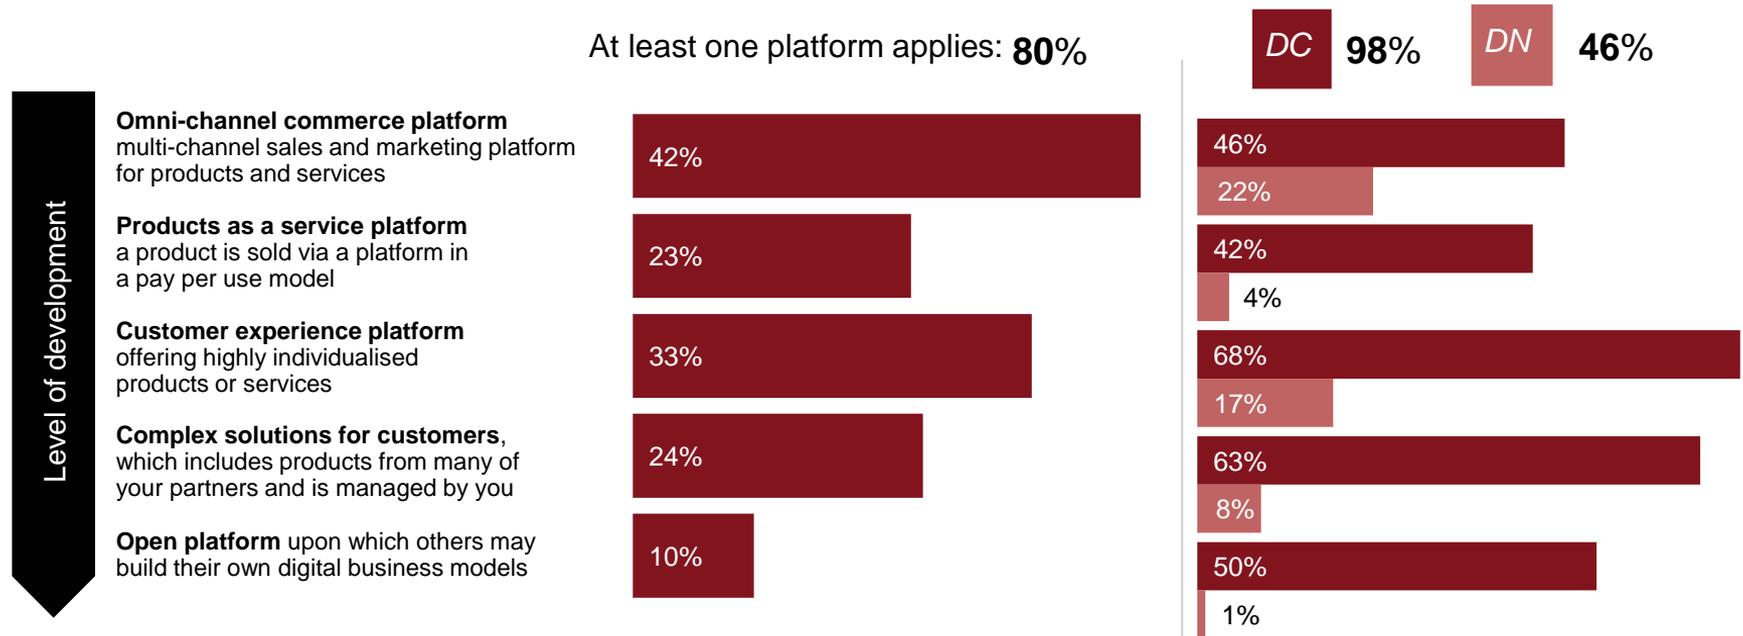

Composition of revenue: status quo

### 3. Digital Champions create value through integrated customer solution ecosystems

#### 50% of Digital Champions leverage open platforms to drive digital business models

Question (Q10): Which types of platform are you focusing on to realise your business model? Please select all that apply.

Note: multiple answers possible // Base: 1,155 companies

# 4. Digital Champions serve customers through integrating operations, technology and people ecosystems

## Supply Chain Maturity

### Level of horizontal integration

**Isolated solutions** and optimisation of **individual processes**

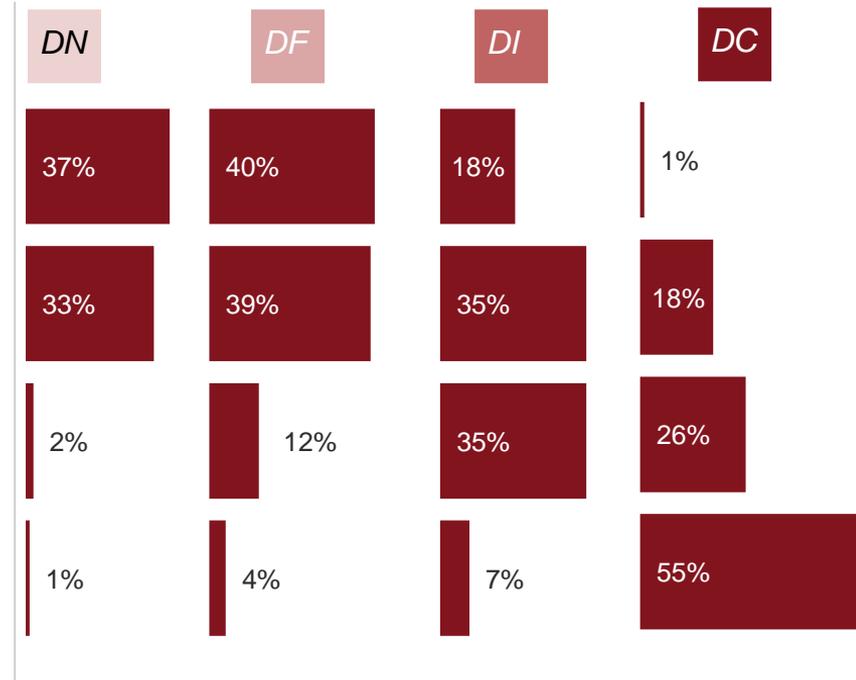

**Internal functions** are integrated and close collaboration

Digitally connected with **external partners, integrated platforms** for collaboration

Near **real-time end-to-end** integration and planning platforms across external network

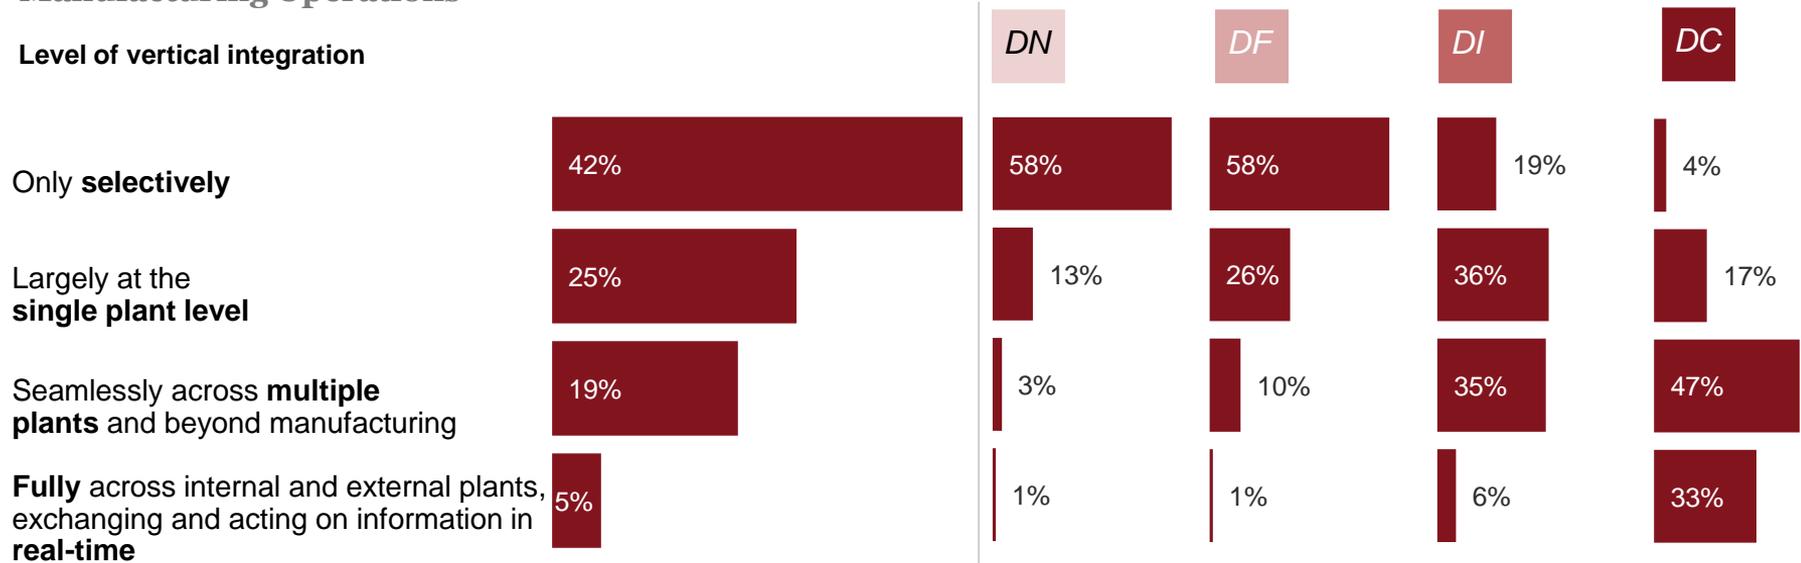

Question (Q11): Which statement best describes your supply chain? Please select only one.  
Base: 1,155 companies

# 4. Digital Champions serve customers through integrating operations, technology and people ecosystems

## Manufacturing Operations

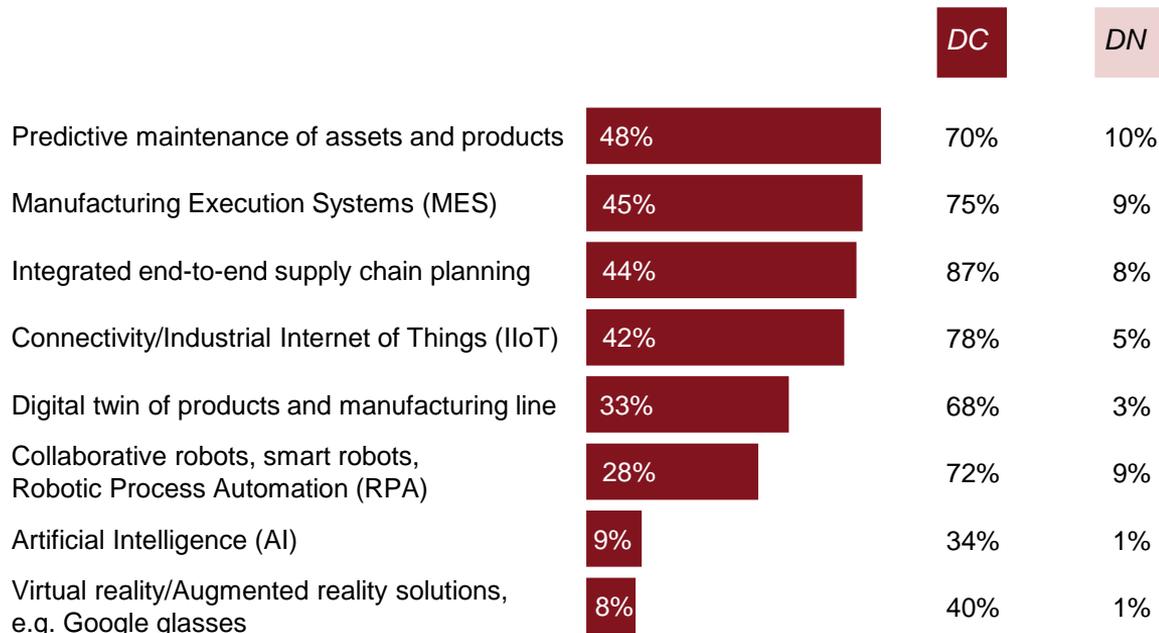

### Level of vertical integration

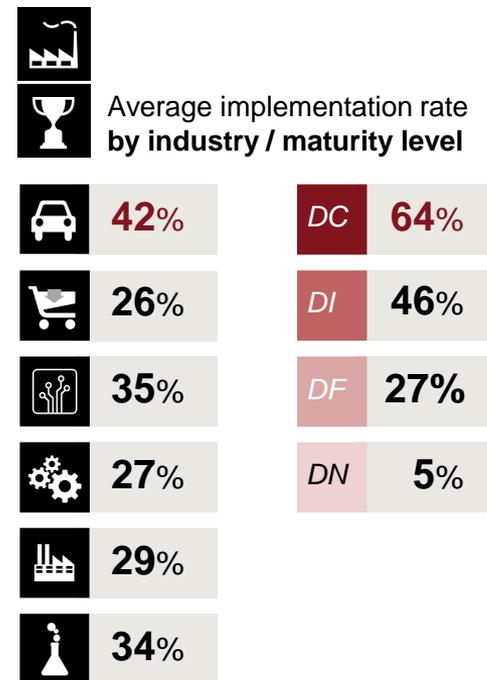

Question (Q12): Which statement best describes your manufacturing operations? Please select only one.  
 Base: 1,155 companies

## 5. New technologies are implemented at large scale to connect and collaborate along the end-to-end value chain

Question (Q1): To what extent have you implemented the following technologies within your company?  
Base 1,155 companies

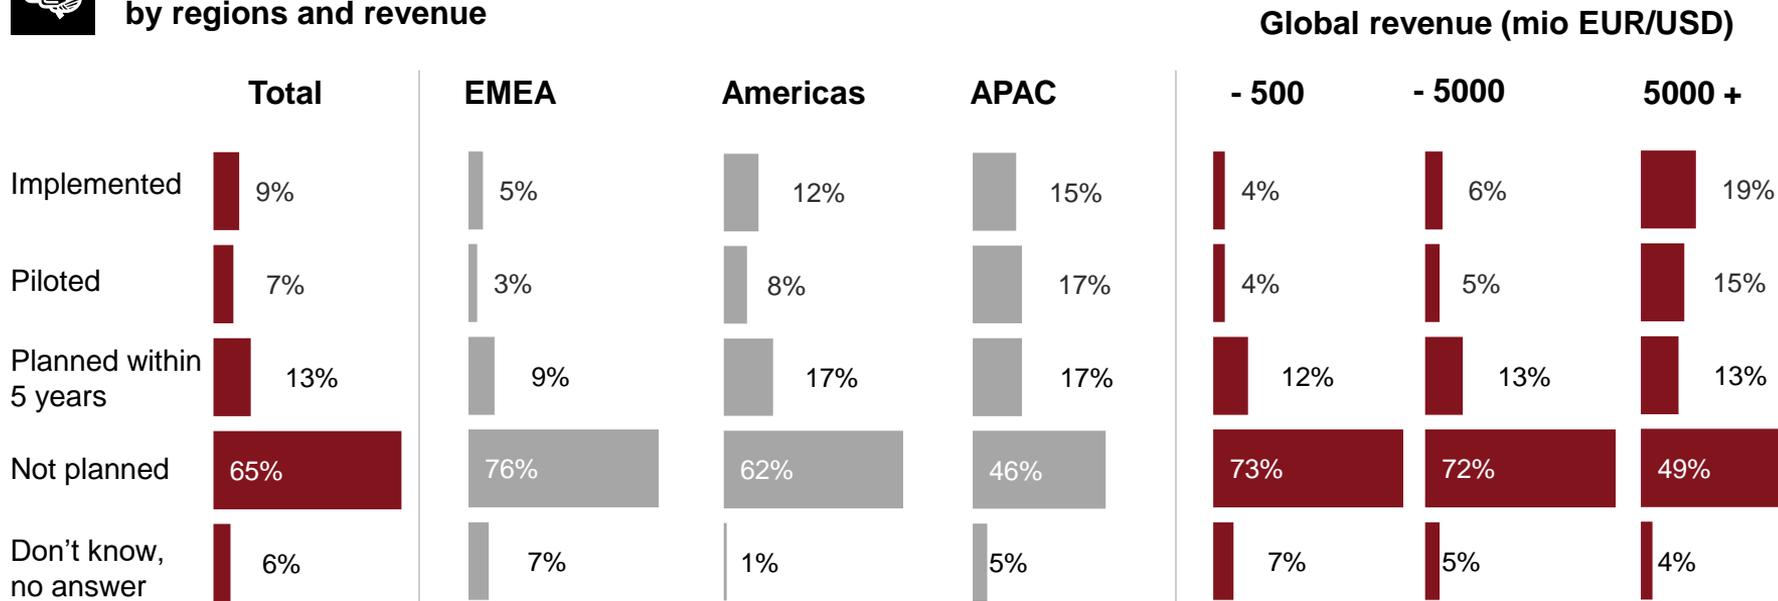

# 6. AI is just kicking off – but will revolutionize the quality of operational decision making

## Most companies have not planned the use of AI - EMEA lagging behind APAC

Extend of Artificial Intelligence implementation by regions and revenue

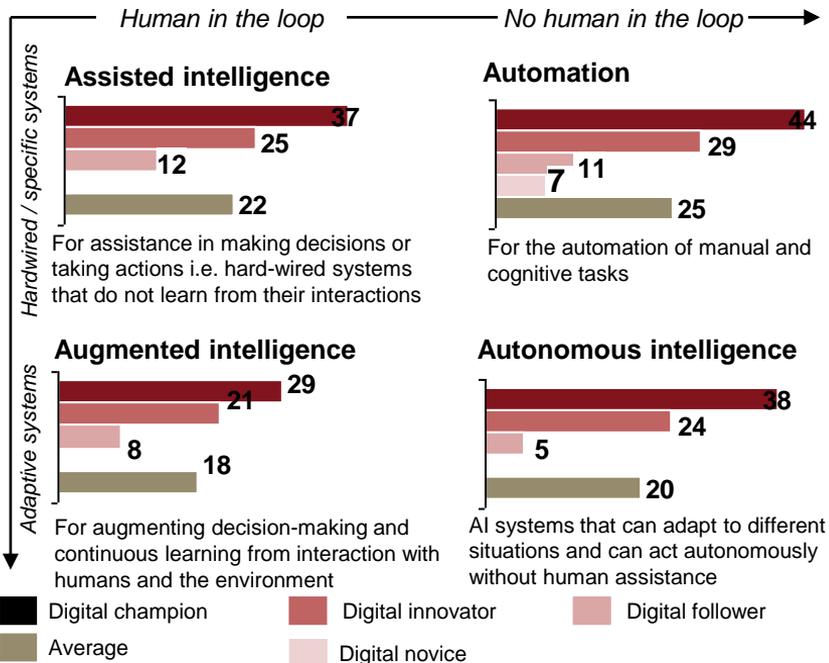

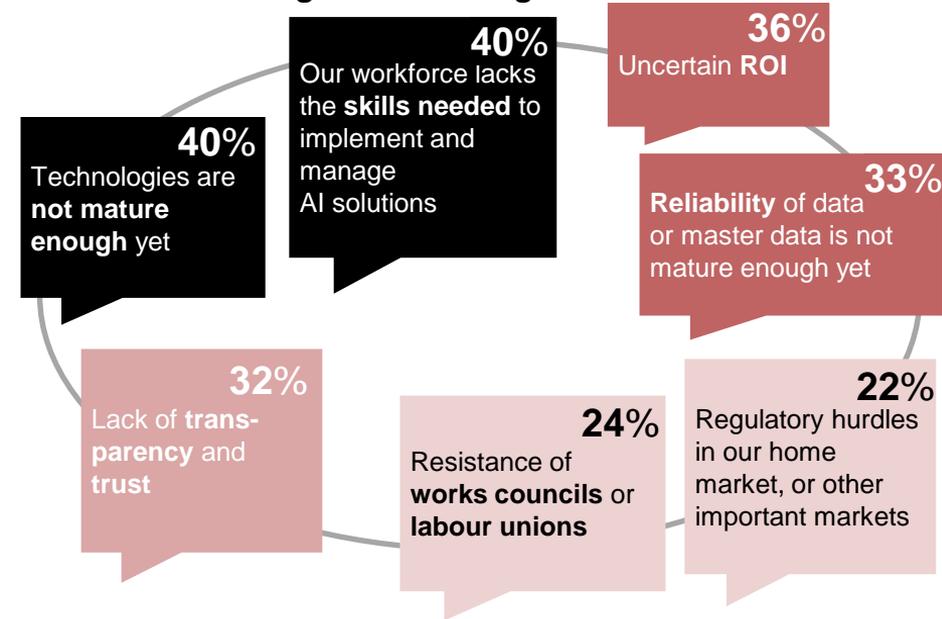

# 6. AI is just kicking off – but will revolutionize the quality of operational decision making

## Leaders use AI beyond simple process automation to design self-learning, autonomous systems

### Ways of using Artificial Intelligence

### Artificial Intelligence Challenges

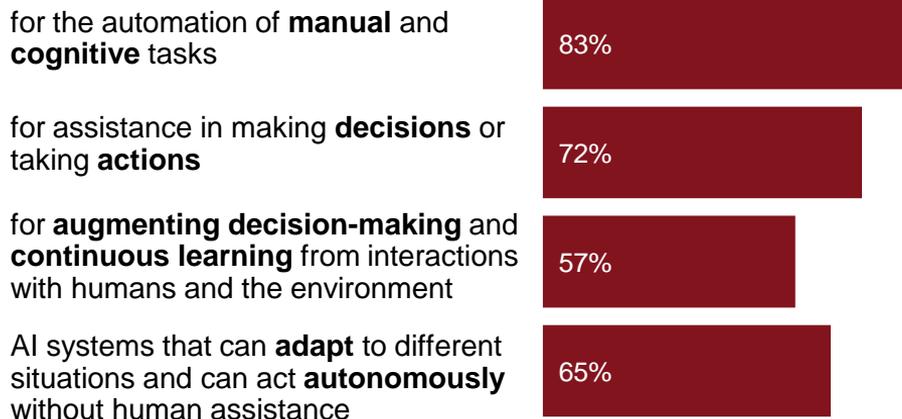

Question (Q4): In what way do you use Artificial Intelligence in your company?  
 Note: Figures in percent. Base: 98 companies that have implemented AI technologies  
 Question (Q5): In your opinion, what are the top 3 challenges associated with AI?  
 Base: 1,155 companies

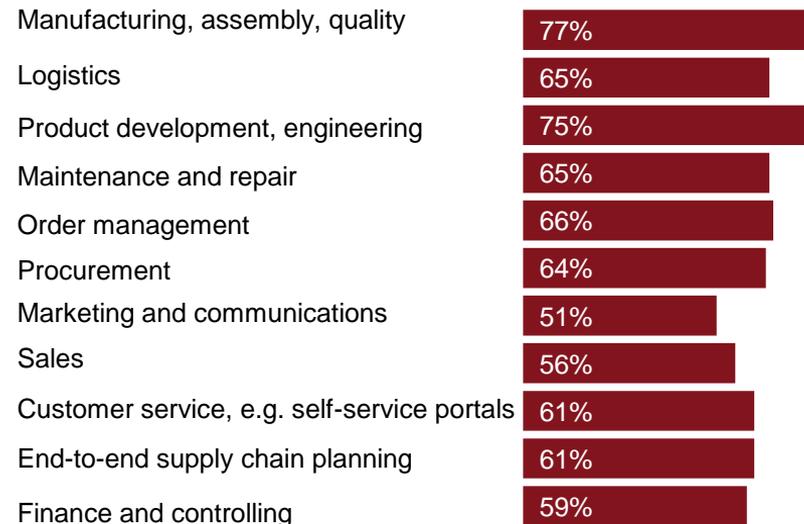

# 6. AI is just kicking off – but will revolutionize the quality of operational decision making

## Artificial Intelligence: Implementation in Terms of Company Functions

### AI businesses are active on all levels of integration

### Implementation of AI by function

Left: Question (Q4): In what way do you use Artificial Intelligence in your company?

Right: Question (Q3): To what extent have you implemented Artificial Intelligence in the following company functions?

Base: 98 companies that have implemented AI technologies // Note: figures in percent; differences in percentage points

## 8. People are at the center of digital transformation

Only 1/3 of companies states to have a leadership with a clear vision for digital transformation

38%

"We regard **failures** as an accepted part of the development process."

37%

"Our company has **flat hierarchies** that facilitate agile working and quick decision-making."

35%

"We are focused on providing a **digital customer experience** throughout the customer journey."

34%

"Our leadership has a **clear vision** for the digital future and acts as **role model**."

32%

"We foster a culture of innovation with **multi-disciplinary teams**."

32%

"We selectively engage with **expert partners** as supplemental external resources."

27%

"Our employees have the required **qualifications** for the digital future."

26%

"We have **invested heavily in training** to make our staff fit for digital transformation."

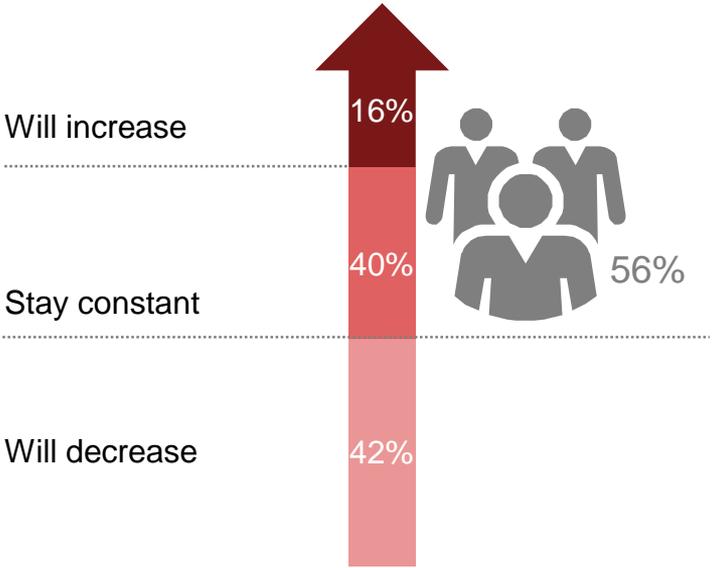

22%

"We build **tandems or learning groups** between digital natives and experienced staff."

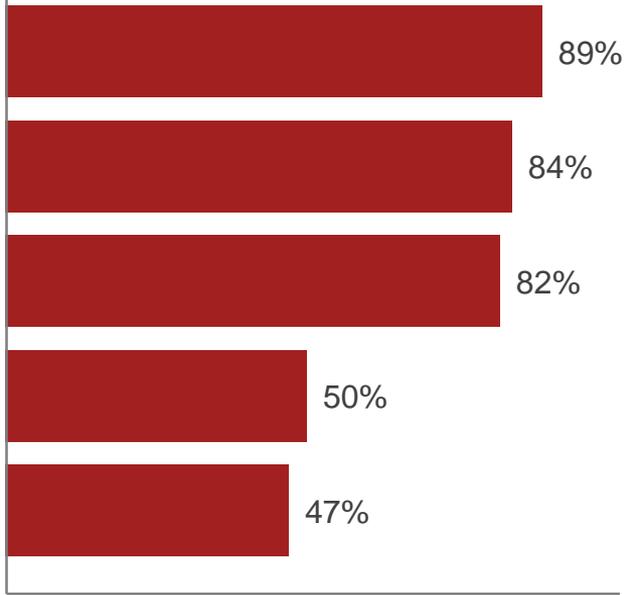

# 8. People are at the center of digital transformation

## Implementing digital manufacturing means building a digital workforce

**Q: What changes do you expect to the number of employees in your factories in total in 10 years as a result of digitisation?**

- Hiring of new employees with the necessary qualifications
- On-going continuing education, in particular for older employees, as well as to meet new demands
- Higher personal costs are offset by efficiency and productivity advantages
- Digital technology enables older employees to remain employed longer
- Replacement of employees retiring due to old age with digital technologies

**Q: What effects do you expect for your company as a result of digitisation?**

## 8. People are at the center of digital transformation

Difficulty in finding adequately qualified employees

81%

Large investments in training and continuing education of employees needed

71%

Technology for cooperation of people and machines not yet fully developed

60%

Difficulty bringing together strengths of older and younger employees

52%

Lacking digital corporate culture

52%

Lack of openness by employees to innovative digital technologies

49%

Present training in schools (colleges, universities) not adequate to qualify employees for the digital factory

44%

0%

20%

40%

60%

80%

100%

**Q: Where do you see challenges for the digital factory with regard to your employees?**

## Current status of Hungary

# Current status of Hungary

- More than 100 indicators
- The indicators have been selected to support
  - the **EU Digital Single Market policies** and
  - to monitor the **digital progress of European Economy and Society**

## General Info

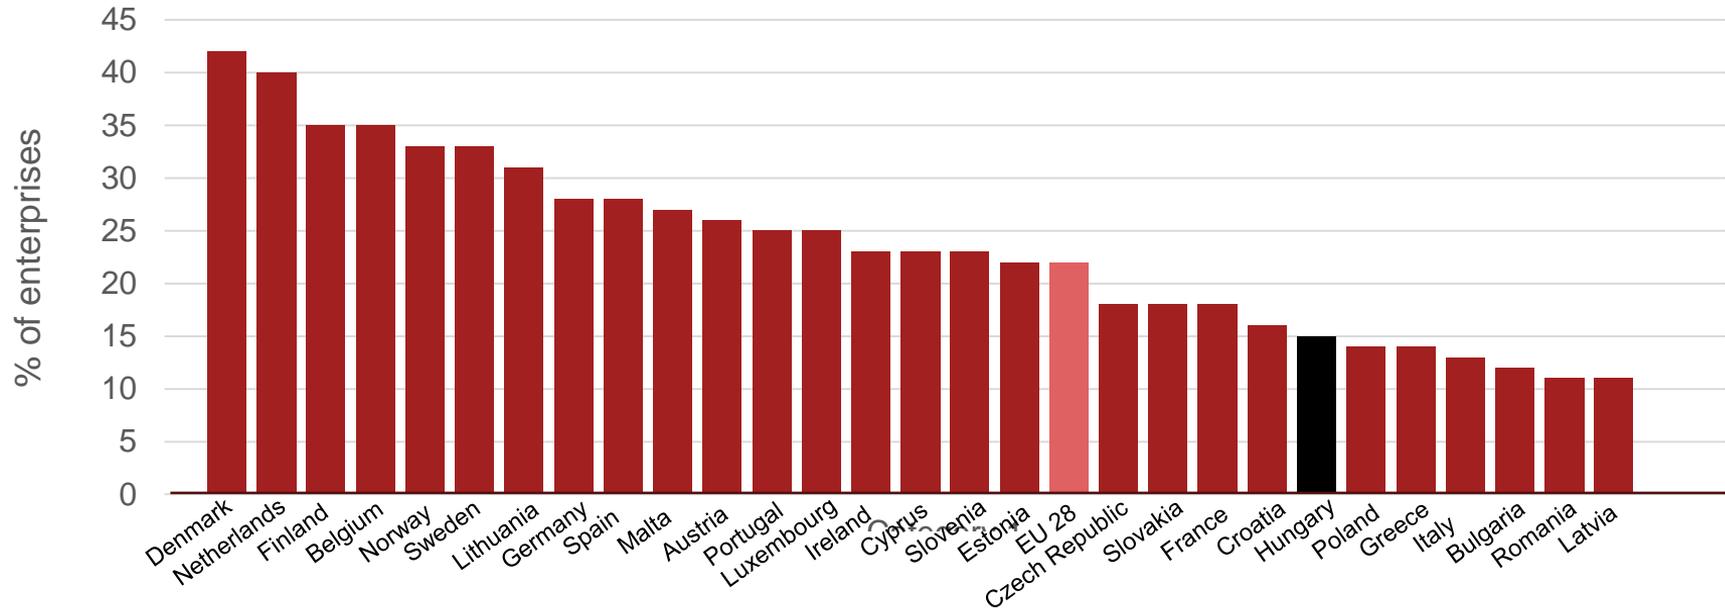

- Formed by ITM (previously NGM)
- Managed by SZTAKI
- 100 members, 7 workgroups

## NTP Survey 2017:

- Needs and expectations of the (manufacturing) industry and strategic economic governance
- Present state of affiliation, acceptance and introduction of Industry 4.0,
- Industry 4.0 specific R & D and Innovation potential.
- Growth potential and its conditions
- 200 companies

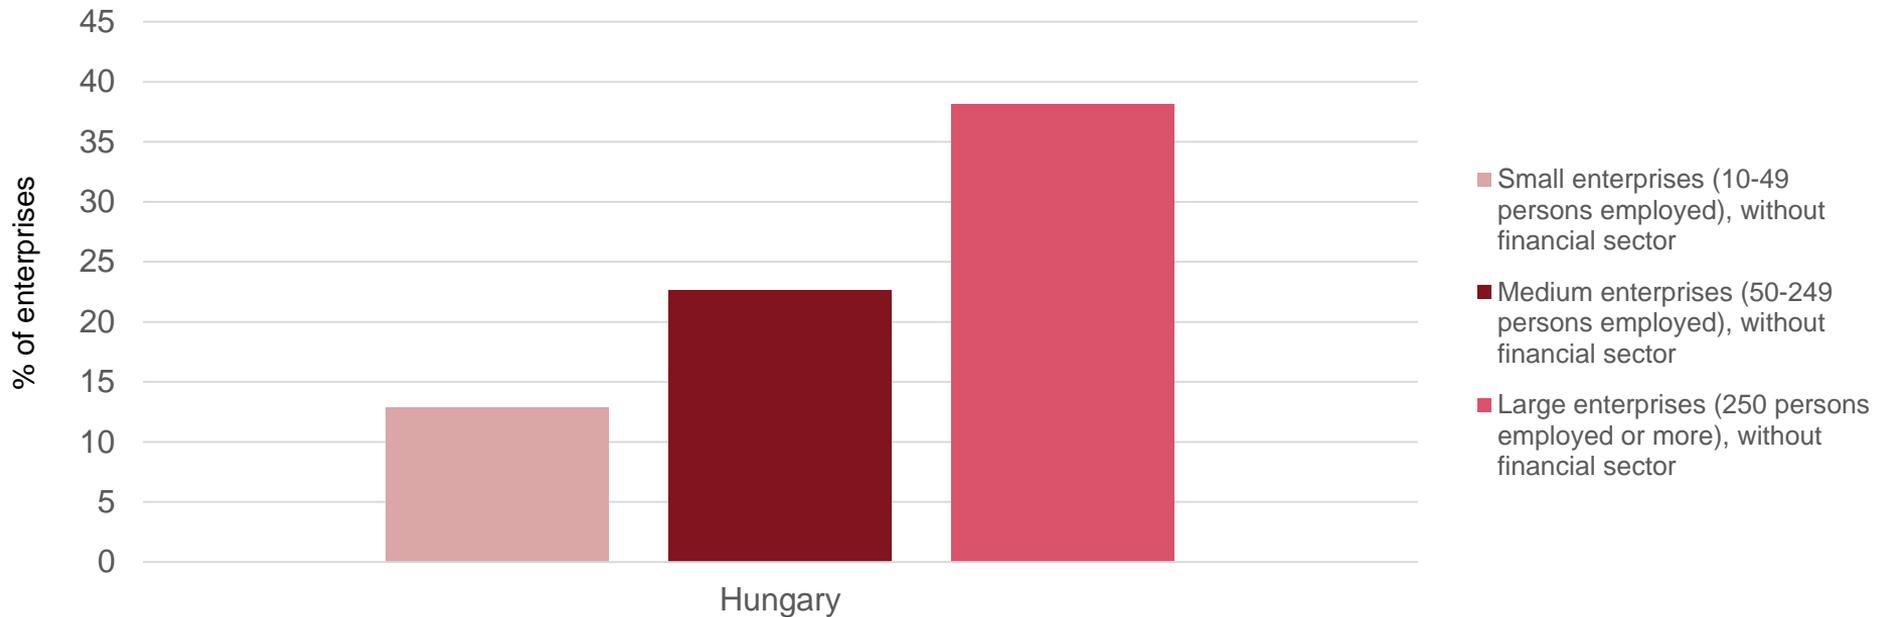

# Status of Digitisation in Europe

Enterprises with High levels of Digital Intensity  
Year: 2017

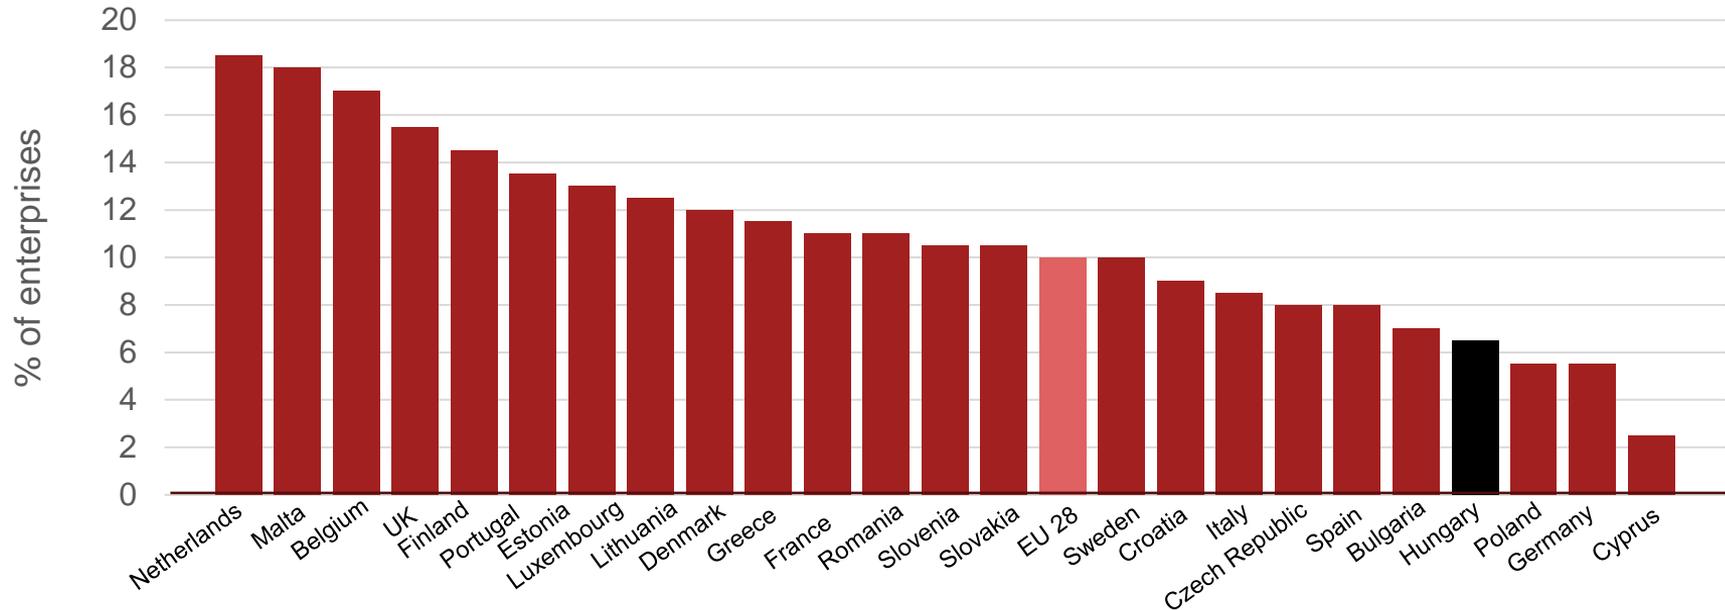

# Status of Digitisation in Hungary

Enterprises with High levels of Digital Intensity, by Enterprise size (Small, Medium, Large), 2017

# Status of Big Data analyzing in Europe

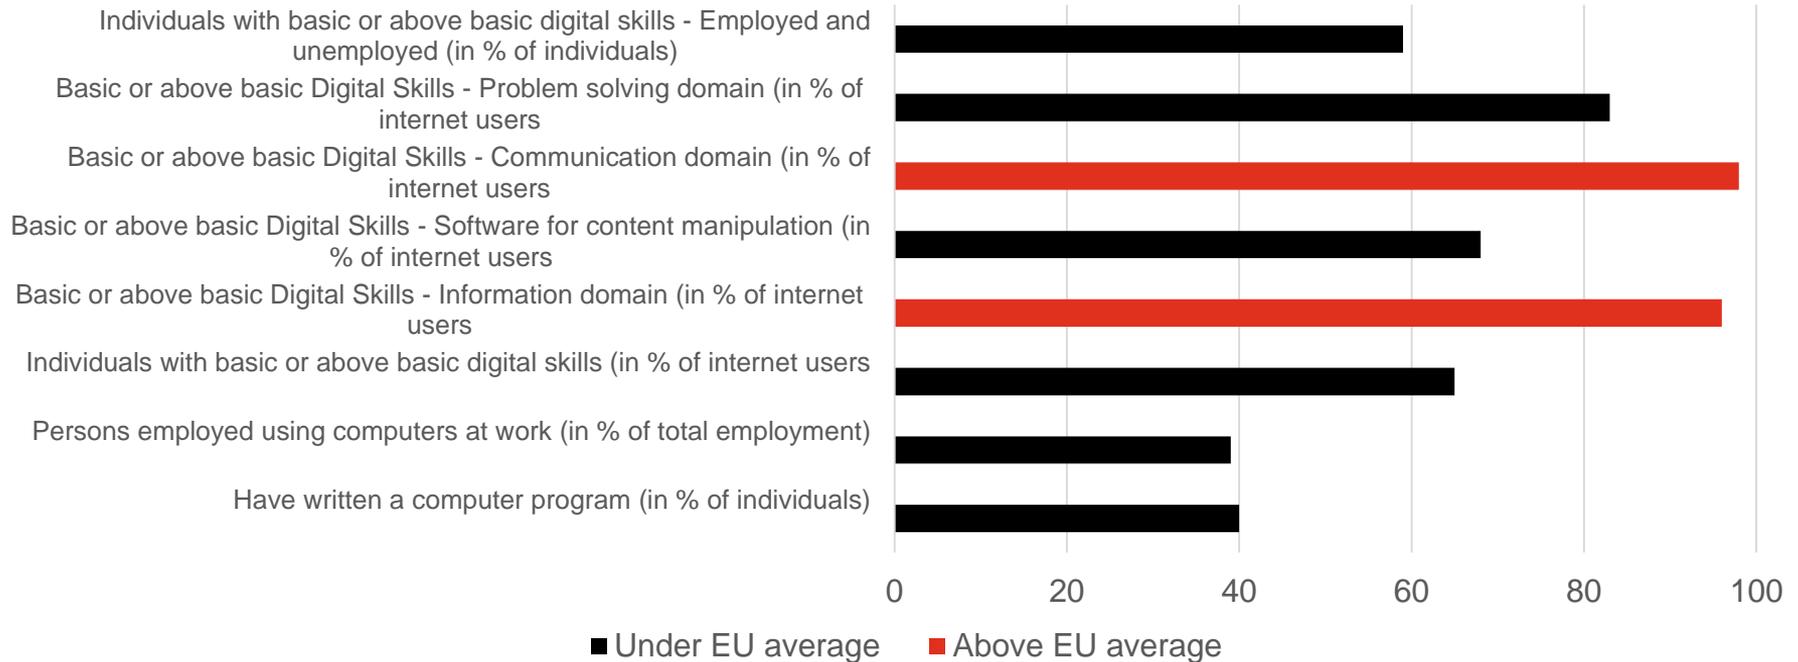

Enterprises analyzing big data from any data source  
Year: 2016

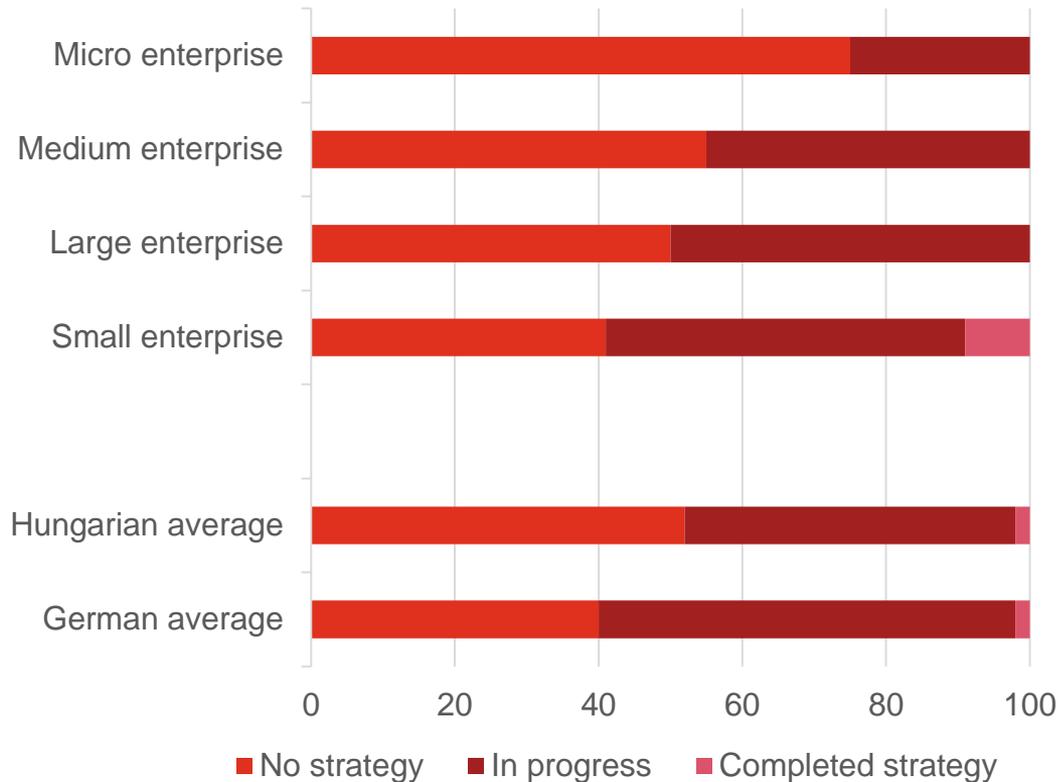

# Country profile for Hungary, eBusiness indicators

# Country profile for Hungary, Digital Skills

# Industry 4.0 strategy implementation at Hungarian Companies

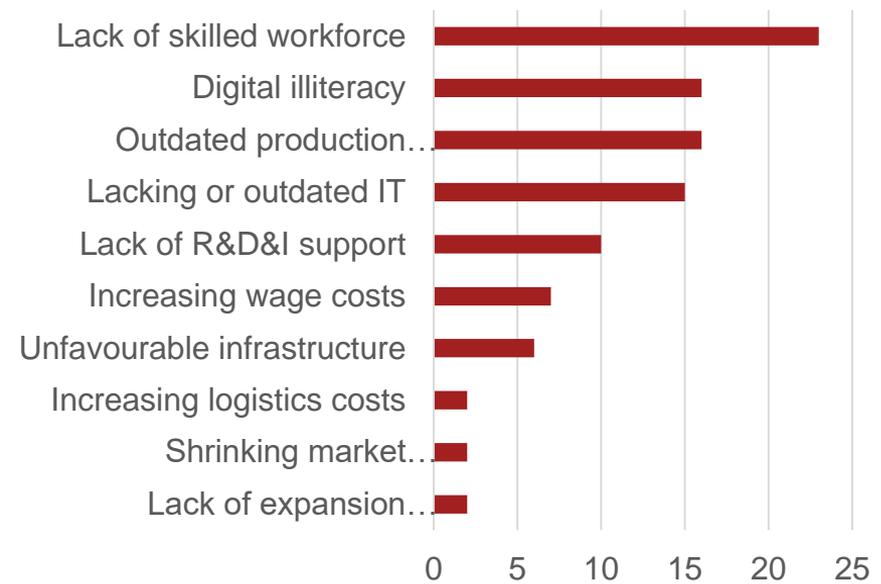

# Technological challenges and obstacles for Hungary

Key challenges of new digital technologies

Barriers to competitiveness in industry 4.0

# Digitising European Industry

The European Commission recognized the need for actions and launched its Strategy on **Digitalising European Industry** on 19 April 2016

The Digitalising European Industry (DEI) initiative aims towards:

Coordination of initiatives for digitising industry

Co-investing in Europe's digital innovation capacities

Providing the appropriate regulatory framework conditions

Providing human capital with the necessary skills for the digital transformation

# Digital Innovation Hubs

**DIH shall provide local industry with:**

Access to the latest knowledge, expertise and technology

Connections to investors, access to financing for digital transformations

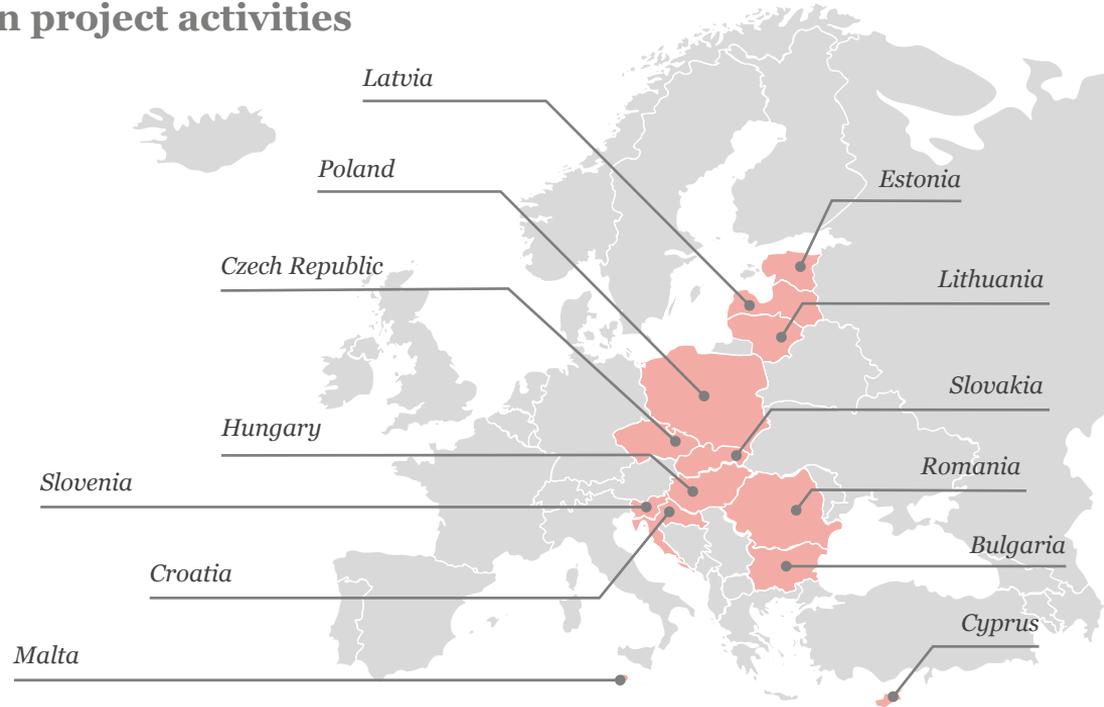

A link between users and suppliers of digital innovations across the value chain

Opportunities to foster synergies between digital and other key enabling technologies

# Project's geographical coverage

## Countries covered in project activities

# Hungary's Digital Innovation HUBs

## AMLab, Szombathely

**Coordinator:** Pannon Business Network Association

**Type of organisation:** Industry associations.

AMLab main objective is to become the service provider for promoting and assisting digitization of SMEs in Western Hungary. In the forefront are additive manufacturing, maturity technology survey and their broad applications.

<http://www.pbn.hu>

## innomine Digital Innovation Hub, Budapest

**Coordinator:** innomine accelerator

**Type of organisation:** Incubators and accelerators

innomine DIH aims at fostering the adoption of Industry 4.0 solutions in order to support digitization of industry by connecting local SMEs to the most innovative Industry 4.0 technologies. The key objective is to promote Industry 4.0 solutions, set up a provider's hub and create a co-creation community to foster the start of new companies and the digitization of manufacturing SMEs.

<http://www.innomine.com>

## Digital Innovation Hub of Kecskemét, Kecskemét

**Coordinator:** IQ Kecskemét Industrial Research Ltd.

**Type of organisation:** Incubators and accelerators

Kecskemét Digital aims at becoming a regional center for entrepreneurial support in digital transformation. The objective is to provide practical advice and support to the SMEs of the region in order to foster digital technologies development and the creation of an eco-system for innovation.
